PROSPECTUS

OR

SPYGLASS-McLEOD MINING

COMPANY, LIMITED

(Non-Personal Liability)

OF

VICTORIA, BRITISH COLUMBIA

Capital - - - - - \$500,000

Shares - - - - - \$1.00 Each

Registered Office:

211 PEMBERTON BUILDING

VICTORIA, B. C.

MANAGER'S POLICY

In every mining enterprise honest, intelligent management is a prime factor of success, both in the direction of operations at the mine and in the financial and legal affairs of the company. Many a good mining proposition has lost its chance of success through mismanagement of either of the above vital factors. Personally, I am a strong believer in the policy of buying the services of men highly trained and experienced in the work you require them to do. For instance, I would not dream of risking the success of our company by personally attempting to plan the work necessary to the proper development of this mine. That is a mining engineer's job and I intend to engage a capable one to do it. The financial and business end of our company, I believe, with the assistance and advice of the capable and successful business men chosen as my co-directors, I am well-qualified to handle successfully. The legal requirements of our company could not be in more capable hands than they are. I feel that a clear understanding relative to my policy is due to the investor in our shares. You may have absolute confidence in the richness and value of the mine, but you also are entitled to have some guarantee that the money you invest is going to be used in a proper manner. My co-directors are all men of the highest standing in their respective lines of business and profession in Victoria, well-known and respected for their integrity and honesty. Therefore, you can absolutely depend on receiving a square deal in this mining venture, and knowing our property intimately as I do, I predict right here that our company will create a sensation in mining circles of B. C. when development gets under way.

R. G. McLEOD,

Manager.

Fred C. Elliott has in his office, 211 Pemberton Bldg., Victoria, B.C., a medal presented at the Nelson Fair 1905, by E. Widdowson, for the best mineral exhibit. This medal was won by the Trout Lake Mining Division on ore from The Spyglass Mine given to Mr. Elliott by John Windquist, the original owner.

PROSPECTUS

Spyglass-McLeod Mining Company, Limited

(Non-Personal Liability)

Incorporated under the "Companies Act," Revised Statutes of British Columbia, 1924.

An Attractive Investment Worthy of Your Careful Consideration!

The aim of this brief Prospectus is to present the actual facts, not to "paint the lily."

The Spyglass Property is well and favorably known to many people in B. C.

It is not necessary to exaggerate its merits.

Its proven richness and the continuity of the vein is sufficient to satisfy any reasonable person that it is the makings of one of the richest mines in B. C.

The fact that it is located in the same formation as all the proven big mines of the famous Slocan District, tends to confirm this belief.

ACTION GUARANTEED

PLANS OF PROCEDURE OF THE COMPANY

We intend to commence operations at the mine by June 15th of this year—earlier if the season permits.

Our first step will be to engage a pack train with full equipment for packing in our supplies and on the return trips bringing out high-grade ore. When we have a carload at Poplar Creek Station we will ship it to the smelter and show the world that the Spyglass can produce the goods in quantity as well as quality. A good camp to accommodate twenty men will be built.

The first miners taken up will be put to work stoping out high-grade ore. No preliminary or dead work is necessary. The first shot will be put in high-grade ore so that we can start packing it out. Other miners will be put at work extending the present tunnels and also opening up the ore body on different levels, including the lowest point in the bank of the creek where the vein shows up strongly about twelve feet wide, with a heavy iron capping that runs 34 ounces silver to the ton right on the surface, and which, we believe, when penetrated, will disclose the high-grade ore that is proven by tunnels 1,000 feet above, as the same conditions prevailed there, namely, a heavy iron capping, before the high-grade ore was encountered.

A first-class Mining Engineer, familiar with the formation of the big mines of the Slocan, will be engaged to make a proper survey and lay out plans for the operations which will be carried out under the supervision of a capable mine foreman. We will take no chances with men who have had no experience under similar conditions, as we want nothing to hinder or delay the great success we are certain that the intelligent and proper development of the Spyglass Property will bring to our Company. Every step will be planned carefully, and only standard proven methods employed.

The next thing to be done will be the installation of a compressor to furnish power so that as soon as possible we can develop our property with machine drills instead of hand work. Owing to being able to get the power from the creek right on our property, the installation of this compressor will not be an expensive undertaking and will greatly speed up development of the property and soon save the cost of installation.

The erection of a plant at the mine to treat the ore will not be entertained until sufficient ore is absolutely blocked out to warrant the erection of such a plant. When that time arrives we will have a thoroughly reliable company make exhaustive tests of our ore in order to determine what method it is most amenable to—then have that company erect the plant under an iron-clad guarantee that it will make the savings they claim and give complete satisfaction in every way. There will be no experimenting with any new-fangled plants. We will follow the standard beaten path and take no chances of disillusionment and failure in that respect.

Remember that the Company owns the property absolutely. Has *clear title to it and no payments to make to any one.* Therefore, the money derived from the sale of shares is for the development and, later, the equipment of the property—every dollar of it, and when you buy shares in this Company those shares therefore represent a certain definite interest in the property, and the money you pay for them goes to enhance the value of that property by developing and equipping it. That is a square deal and giving the investors a fair run for their money. The money will be honestly spent on the property, not paid out to high-salaried officials to sit around in a flashy, expensive office. The management of the Company will be under the direct supervision of R. G. McLeod, the President of the Company, and former owner of the property, at a nominal salary. He will actively and consistently look after the interests of the Company in a business-like manner. This is his pet mine. He is the largest shareholder, and it is his life's ambition to make a great success of the property, which he has absolute confidence in. Naturally it is to his interest more than to anyone else, to carefully safeguard the interests of the Company to whom he has given a clear title of the mine. This shows his faith in it, and you are given an opportunity to share the great success and large profits that we believe is certain to ensue from the proper development and careful management of the property.

Note extracts from Minister of Mines annual reports regarding the Spyglass.

Copy of references relative to the honesty and business ability of R. G. McLeod, from bank and other business and professional men of high standing in B. C., will be given to any intending investor upon request.

A Short Summary Report

By R. G. McLeod

on

The Spyglass Group of Mineral Claims

PROPERTY

This group is composed of ten claims; the Spyglass and Globe, being the original locations, are Crown granted. The Silver Banner, Silver Hoard Silver Bugle, Silver Bell, Silver Treasure, Silver Goat, Silver Clasp and Silver Horn, being more recent locations and recorded in the Trout Lake Mining Division, West Kootenay District, B. C.

TRANSPORTATION

The property is reached by boat from Nelson or Kaslo to Lardo, thence by rail to Poplar Creek and then by trail twelve miles up Poplar Creek.

GEOLOGY

A band of granite is crossed before reaching the Spyglass property and this formation is about one mile wide; the main mass of granite lies about one thousand feet to the West. The vein is inclosed in a band of slate cut by tongues of granite and pegmatite. The lead lies between two of these striking with the formation 308 degrees angle 43 degrees west.

The lead consists of quartz from two to three feet wide distributed through and between the laminae of the slates and replacing them.

A great deal of pyrite occurs in the rock and ledge matter, while the quartz is somewhat cavernous and crystals are developed.

Within the lead is a ~~pay~~ streak six to fourteen inches wide, heavily mineralized with tetrahedrite, galena, copper, iron pyrites, native silver and probable argentite. This ore runs very high in silver; assays as high as 3,740 ounces having been obtained, according to Government report.

In the report of the Minister of Mines for the year 1902, page 141, the following statement occurs: "The Spyglass group on Poplar Creek, owned by John Winquist, contains some of the highest grade ore in the Lardeau, assays having been given of three thousand seven hundred and forty ounces of silver and one hundred and twenty dollars to the ton in gold." The report for the year 1903 states: "The Spyglass group is located well up in the granite belt where it is cut by a large dyke. The ore is grey copper and native silver. Beautiful specimens are obtained and assays reported from three thousand to four thousand ounces in silver, also high assay in gold."

VALUES

The above assays were no doubt from choice specimens, but recent assays taken from the vein show values from 4 ounces of silver in the iron pyrites to 403 ounces of silver and 16.8% of lead.

In white quartz where no native mineral showed, the assay discloses 101.6 ounces silver and .18 ounces gold. In quartz intermixed with a little galena 154.5 ounces silver and .10 ounce gold. Another

Government assay gives gold, 0.10; silver, 352.4 ounces; lead, 12%; zinc, 2%, and where vein was 12 feet wide gold, 0.01; silver, 34.5 ounces; lead, 0.6% Government assay. Another assay gives 183.52 ounces silver. This assay was made by Falkenberg & Company, Seattle, and from ore not showing any native silver.

DEVELOPMENT

Two tunnels were driven in on the vein about one thousand feet above the cabin and creek, one for about fifty feet and one for two hundred and fifty feet.

The vein at the portal of the fifty-foot tunnel is about four feet wide and is composed of quartz and iron pyrites, but when in about ten feet the high grade ore was encountered.

The second tunnel is about 100 feet below and was driven in on the vein and the same rich ore was found when about seventy-five feet from the portal. There is a good grade of milling ore all the way and still in the face of the tunnel. The vein is exposed for two hundred feet below the lower tunnel and for about fifteen hundred feet above right to the crest of the mountain, which is very steep at this point and bare of earth.

The vein shows in an unbroken and unfaulted condition all this distance.

Another rich ore shoot is exposed on the surface several hundred feet above the upper tunnel. The lower tunnel, when extended, should tap this rich shoot of ore, it is estimated within a hundred feet.

same vein
2000
30
del
About two hundred feet below the lower tunnel the vein is covered by slide rock, but crops out again in the bank of the creek about one thousand feet below, showing up strongly ten to twelve feet wide and is a beautiful quartz heavily impregnated with iron pyrites with a few specks of galena distributed through it.

An assay made by the B. C. Government assay office of pieces knocked off here with a prospecting pick showed 34.5 oz. of silver.

It is expected that when this large body of quartz and iron capping is penetrated, the high grade ore will be encountered the same as was done in opening the upper workings.

This belief is reasonable and strengthened by the fact that the capping here with very little galena showing assayed so high in silver.

The vein at this lowest point shows the same formation, dip and strike as above, but has widened out to about three times its width above.

POWER AND MILL SITE

There is a fine mill site on this property and an abundance of power can be secured from Poplar Creek, which runs through the lower claims, to run a large plant and supply all power needed in the development of the mine.

TIMBER

An abundance of fine timber is on the claims for mining purposes and camp building, and not far distant there are some very fine meadows where pasturage can be secured for horses or mules to be used in the packing in of supplies and taking out the ore in the early stages of development.

ORE SHIPMENTS

To the best of my recollection in 1904 we shipped about one ton of high grade ore and received a cheque from the smelter for \$325.80 net.

The amount fixed as the minimum subscription on which the directors may proceed to allotment is \$1,500.00.

ITEMIZED ACCOUNT:

4,000 shares.....	\$4,000.00
Estimated preliminary expenses:	
Disbursements	\$ 300.00
Services	200.00
Estimated supplies necessary to commence mining.....	1,000.00
Commission	500.00
Discount	2,000.00
	<hr/>
	\$4,000.00

The property to be purchased by the Company is the Spyglass and Globe Crown Granted Mineral Claims, and the Silver Banner, Silver Hoard, Silver Bugle, Silver Bell, Silver Treasure, Silver Goat, Silver Clasp and Silver Horn Mineral Claims held by location and record, and the aforesaid claims are to be transferred absolutely to the Company in consideration of 250,000 shares of its capital stock, and nothing is payable for goodwill.

The name and address of the vendor is R. G. McLeod, Beverley Apartments, Yates Street, Victoria, B. C.

No debentures are being issued or offered to the public for subscription.

There are no promoters, founders or management or deferred shares and nothing payable for services rendered except incorporation expenses.

Each member has one vote at meeting for each share held by him.

The qualification of a director is one share and the remuneration of directors is determined by the Company in General Meeting.

A copy of the balance sheet and report of directors shall seven days previous to the Annual Meeting be sent to persons entitled to receive notice of such Annual Meeting.

The full names, description, and addresses of the directors and the amount in cash subscribed by each of them for shares of the Company or otherwise contributed are as follows:

DATED this 2nd day of February, 1928.

Witness

JEAN E. RUTLEDGE

F. M. Bryant, Physician, Victoria, B. C. \$10.00.

W. A. Willis, Merchant, Victoria, B. C., \$10.00.

D. Fyvie, Merchant, Victoria, B. C., \$10.00.

F. C. Elliott, Solicitor, Victoria, B. C., \$10.00.

R. G. McLeod, Mining, Victoria, B. C., \$10.00.

None of the directors have any interest in the promotion of or in the property proposed to be acquired by the Company except R. G. McLeod, who is transferring to the Company the claims hereinbefore described for the consideration hereinbefore mentioned.

The name and address of the Auditor is E. H. Kidd, Central Building, Victoria, B. C.

No amount of shares has been previously offered to the public for subscription and this prospectus is not issued more than one year after date of incorporation of the Company.

The dates of and parties to every material contract entered into by the Company is as follows:

Agreement dated January 19th, 1928, made between R. G. McLeod and the Company whereby the said R. G. McLeod agrees to transfer to the Company the mineral claims hereinbefore described for 250,000 shares of its capital stock, and a copy of the agreement may be seen at any business hour at the registered office of the Company.

This Company has not yet obtained a certificate entitling it to commence business, and is not authorized to allot any shares or debentures, unless the minimum subscription stated in the Statutory Information set forth in this prospectus is subscribed, and a certificate to commence business is subsequently issued to the Company under the "Companies Act." All money received by the Company in respect of the minimum subscription will, in accordance with the "Companies Act," be held in trust by the Company to be repaid if the minimum subscription is not subscribed.

Directors:

ROBERT GARVIN McLEOD

Extracts From Minister of Mines B. C. Annual Report

(Re Spyglass)

In report of year 1902, page 141: The Spyglass Group on Poplar Creek owned by John Windquist contains some of the highest grade ore in the Lardeau, assays having been given of three thousand, seven hundred and forty ounces of silver and one hundred and twenty dollars in gold to the ton.

In report of year 1903, page 126: The report states the Spyglass Group, also on Poplar Creek, and which has one of the best surface showings of high grade ore in the division, has been bonded by R. G. McLeod, of Nelson, B. C., who will proceed with development in early spring.

In report of year 1903, page 112: States that the Spyglass Group is located well up in the Granite Belt, where it is cut by a large dyke, the ore is grey copper and native silver. Beautiful specimens are obtained and assays reported from three thousand to four thousand ounces of silver, also high assay in gold.

In report of year 1904, from Minister of Mines, page 118: States Spyglass development very satisfactory. A test shipment of three tons has been sent to the smelter.

Wire silver in every conceivable form and variety was to be seen in Nelson a few days ago, when R. G. McLeod, who for 24 years has held the Spyglass Group on Poplar Creek, in the Lardeau, passed through the city for Seattle with perhaps a couple of hundred samples from that property. Mr. McLeod took over a hundred out of their paper swathings, and they made a glittering show in his room at the Hume. Veining the quartz samples in every direction, sometimes protruding the surface as almost leaves of silver and sometimes with the mossy effect, the wire silver made a unique show. Not a sample in the lot but had wire or native silver.

Most of these samples are from showings on the main vein of the Spyglass, whose underground development is practically all in ore. This vein is from 3½ to 5 feet in width, with a pay streak of 6 to 14 inches.

Some of the samples have to be handled very tenderly, as their veins and nuggets of silver in the quartz make them very fragile.

The story of the old Spyglass, admittedly one of the richest properties in the Kootenay on its showings to date, is one of romance. In the days of the "Poplar rush," or "Poplar excitement," its name was one to conjure with.—*Extracts from the Nelson Daily News, Nelson, B. C., Oct. 20, 1927.*

LOCAL STOCKS

One of the most pleasing features connected with the mining industry of British Columbia has been the wonderful amount of interest evinced by Eastern Canada financial houses during the past year, and at the time of writing, orders are coming to the brokers of Victoria and Vancouver for practically all the loose stock on the market. In this direction, Toronto, Winnipeg and Montreal are showing competitive interest, with the result that many shares have more than doubled their value in a very few weeks, while the past six months shows a tremendous improvement in prices. To illustrate only a few, the following figures will be interesting:

Mining	Quotations	
	June 22, 1927	January 19, 1928
Premier	Bid 2.06	Sales 3.55
Coast Copper	" 16.00	" 57.50
Sunlock	" .90	" 5.00
George Copper	" .95	" 4.15
Porter Idaho	" .14	" .75
Marmot Metals	" .10	" .19

Rufus and Argenta were selling during December at 6 and 7 cents, while today they are bringing 50 and 70. Pend Oreille more than trebled their price in a like period, selling on the Vancouver Exchange on January 19, at \$10.00.

STATUTORY INFORMATION

The Company was incorporated on the 12th day of January, 1928, having its registered office at 211 Pemberton Building, Victoria, B. C.

The liability of the members is specially limited under Section 21 of the Companies Act.

The authorized capital is \$500,000.00, divided into 500,000 ordinary shares of \$1.00 each.

The Company is permitted to pay a commission of 25% of the selling price of its shares and allow a discount not exceeding 85 cents per share.

The amount of capital subscribed for and paid up is \$50.00 and there is nothing due from the Company in respect of mortgages.

The operations of the Company will be carried on at the property on Poplar Creek, West Kootenay, British Columbia, and it is proposed to take in supplies and immediately commence the extraction of high grade ore.

The number of shares offered by this Prospectus for subscription is 4,000 shares, allowing a discount of 50 cents per share, and paying a commission of 25% on the sale price of shares, and the amount payable on application is 50 cents per share.

We also shipped about two tons of ordinary ore and received a cheque for \$148.17 net.

These shipments were made for the purpose of determining definitely what the ore would run in quantity—the intention was to erect a plant to treat the ore at the mine the next year.

R. G. McLEOD.

Certificate No. 11369, 11370A

BUREAU OF MINES, VICTORIA, NOV. 11, 1927.

GOVERNMENT ASSAY OFFICE

Assay Certificate

I HEREBY CERTIFY that I have assayed the following sample handed me by R. G. McLeod, Esq., 628 E. Seventieth St., Seattle, Wash., and said to represent ore from Spyglass claim.

No. 1.—Gold, 0.10 oz. per ton; Silver, 362.4 oz. per ton; Lead, 12.0% Wet Assay; Zinc, 2.0%. No. 2.—Gold, 0.01 oz. per ton; Silver, 34.5 oz. per ton; Lead, 0.6% Wet Assay.

NOVEMBER, 1903

Bonds Spyglass Group

Seattle Man Makes First Big Deal in British Columbia's New Camp

POPLAR, B. C., Nov. 5.—(Special.)—One of the largest deals yet made was consummated today, when R. G. McLeod, 931 Twenty-fifth avenue, Seattle, took a two months' bond on the Spyglass group for \$35,000.

The owner of the Spyglass, John Winquist, recently brought to camp samples of fabulously rich quartz, containing native gold and silver. It was the most phenomenal of many rich specimens exhibited since this new camp first came into prominence. McLeod had just struck camp. A half dozen operators were already besieging Winquist for a bond on the group. McLeod beat them by putting up \$1,000 in cash for the privilege of making the first examination. So satisfied was he that on his return here tonight he signed the papers. He said:

"The Spyglass has certainly a wonderful showing. In a four-foot quartz vein is a ten-inch pay streak literally spattered in free gold and silver."

McLeod cleaned up a small fortune in the Fish creek camp in the Upper Lardeau. He then went to Seattle to live. The discovery of this camp once more enticed him to the hills, and his first venture in Poplar was the bonding of the Spyglass group.

Seattle P. I., Nov. 6th, 1903.

When to Buy Mine Stock

CECIL RHODES, Empire builder and financier, is credited with the statement:

"The time to invest is when a company is seeking capital for further development and while the stock is comparatively cheap."

Mining to Be in Lead

"I believe that mining will be in the first place among industries very shortly, not only in British Columbia, but in all Canada."

This statement was made by C. M. Oliver, of C. M. Oliver & Company, at a luncheon of the Vancouver Board of Trade.

Local Stocks Shoot Upward

Several stocks on Friday last took a jump forward. L. & L., Ruth Hope, Cork Province and Lucky Jim. They were not surprises, since development on the properties has been showing results. It would indicate, too, that mining stocks will show up strong this fall and that they will be in great demand.

Extracts From the Rossland Miner of January 26, 1904

One of the wonderful properties at Poplar is the famous Spyglass Group, located some 11 miles from Poplar City, on the headwaters of Poplar Creek. The group was staked by John Windquist in 1891. The ore at first met consists of a quartz mineralized with grey copper. About a month since, however, a remarkable strike was made by Mr. Windquist. It consisted of the uncovering of a showing of ore of wonderful richness. The find created considerable excitement in Poplar, the camp of rich finds.

* * *

The property has been opened up by two tunnels, and the showing of ore would satisfy a Clark, a Hearst, or a Heinze, so rich is it. The Spyglass Group has been pronounced by good judges to be one of the very best properties for the same size of vein in the province. Late in December, 1903, the property was purchased by R. G. McLeod. Shortly after this, Mr. McLeod sold a half interest to Bruce White, of Nelson, for a considerable advance on what he had paid. Both these gentlemen are considered as good judges of a mining property as any in the province. Mr. White was at one time the sole owner of the Slocan Star, which has paid half a million dollars in dividends. Mr. White for a long time successfully operated the Mollie Gibson mine, a valuable silver-lead property located a short distance from Nelson. Mr. McLeod has been a successful operator in the Camborne camp. He was one of the owners of the Oyster Criterion Group and put through the deal for the Rossland Group in Camborne. He is one of the largest shareholders in the Eva Group.

Spyglass Group Again in the Limelight

This property has the earmarks of one of the richest silver mines in B. C., being situated 12 miles up from the mouth of Poplar Creek, and in the same formation as all the big producing mines in the Slocan District. It was located by John Windquist in 1891 and sold to

R. G. McLeod, of Nelson, B. C., in 1903, the price being \$35,000. Later, Bruce White, a large mining operator in the Slocan country, James A. Magee, lumberman, and Dr. Geo. S. Armstrong, of Spokane, Wash., became associated with R. G. McLeod in the property.

Considerable development was done with very satisfactory results, sufficient to prove that the Spyglass had the making of a rich mine.

Considerable excitement was caused in Poplar Creek at the time of the purchase of the mine, as several different companies were endeavoring to secure an option on the property. Mr. McLeod, a former operator in the Upper Lardeau at Camborne, B. C., beat them all out by giving a cheque to the owner of the Spyglass for \$1,000.00 before he saw the property.—*Extract from Western Canada Mining News of June 24, 1927.*

The story of the old Spyglass is one of the romances of the Kootenay. The property has always been known as one of the richest in British Columbia, and now it will be worked. The Spyglass was located by John Windquist in 1891, and Mr. McLeod, of Nelson, and later proprietor of the Lardeau Hotel at Comaplex, beat those in the rush for the property, and carrying a cheque for \$1,000 got to the owner first, contracting to pay \$35,000 in all for the property. He started development driving a tunnel in 250 feet, exposing the good ore. He got Bruce White, the big Slocan operator, James A. Magee, lumberman, and Dr. G. S. Armstrong, of Spokane, to join him in the development, which was held up by their deaths. The property has only this year come out of the succeeding litigation.—*Extract from Victoria Daily Times, of December 7, 1927.*

Riches in Spyglass

Owner Develops Ground Unworked for Decades: McLeod's Purchase Sent a Man

Abroad and to Affluence, He Relates

Poplar Creek, in the Lardeau District of British Columbia, a region of excitement 23 years ago, is the scene of rich and recent discoveries, according to R. G. McLeod, formerly of Nelson, now of Seattle, at the Spokane Hotel this week.

The Spyglass is one of the famous properties located at the time of the excitement. It was in litigation, but that has been cleared up. As proof of his success there, Mr. McLeod submitted sacks of 200 samples that included grey copper and native silver, nugget silver and gold ore. Gold and silver were side by side in one of the samples. "They came from the Spyglass Group, of which I am the owner," he said.—*Extract from The Spokesman-Review of October 14, 1927.*
