MEMORANDUM

DATE: June 23, 1998 **TIME:** 6:25 PM
TO: Mark Rebagliati, Darrel Johnson
FROM: Richard Haslinger
RE: FRAN PROPERTY SUMMARY

Location and Access

The property is located at latitude 55° 00' north and longitude 124° 25' west, on NTS map sheet 93K/16W, in the Omineca mining district. The property is centered 7 km north of Inzana Lake on a two-year-old clear-cut that is 82 km by road north of Fort St. James, central British Columbia, Canada.

Geologic Description

The Fran mineral property contains a gold-bearing stockwork and vein system that outcrops on logging roads. Gossanous, pyritic and fractured monzonitic (?) intrusive rock hosts both sulphide and quartz veins that are individually up to 0.30 m wide and contain 15 to 48 grams gold per tonne. Samples of the pyritic altered monzonite hosting the veins contain several hundred ppb gold to greater than 1000 ppb gold over a strike length of 1500 m and a width on the order of 50 m. From rapid reconnaissance prospecting, the intrusive body hosting the gold is thought to be about 100 m wide and several kilometres in length. This dike or sill is located along the southwest edge of a 2 km by 3 km dioritic stock, and like the stock, has intruded cherty argillites with interbedded augite crystal tuffs in the mineralized area. These rocks are part of the western margin of the Takla Volcanic Belt. The Mt Milligan property is about 30 km to the northeast. Outcrop exposure for the area is about 15% and till cover is generally less than a few metres thick.

Claims

The property comprises four 20 unit mineral claims (20 km²), the Fran, Fran#2, Fran #3 and Fran #4 claims. Although gold mineralization was first recognized two years ago, the property is just now available for review by interested parties. Title for the claims is in the name of Richard Haslinger Sr. who is seeking to option the claims on behalf of a three-person partnership.
