

KWUN CLAIMS

Summary

The Kwun claims are located 10 kilometres northeast of the town of Horsefly in the Cariboo Mining Division. Logging trails provide excellent access to most of the property.

The Kwun claims have been an active prospect for copper and gold since the early 1970's. Reassessment of the property since 1984 in light of the geology of the QR deposit has identified a coincident soil gold geochemical and induced polarization target. The target area is underlain by felsic breccias and conglomerates with interbedded basaltic rubble just south of a zoned alkalic stock.

Claims

The Kwun 1 to 4 claims consist of 48 units and are located in the Cariboo Mining Division on NTS mapsheet 93A/6W.

<u>NAME</u>	<u>RECORD NO.</u>	<u>NO. OF UNITS</u>	<u>EXPIRY DATE</u>
Kwun 1	2085	12	October 24, 1988
Kwun 2	2086	12	October 24, 1988
Kwun 3	2087	12	October 24, 1988
Kwun 4	2088	12	October 24, 1988

Previous Work

1973 - Staking (Dome-Newconex)

1974 - Mapping, soil sampling, magnetometer survey, IP survey, 12 percussion drill holes, 2 diamond drill holes

1975 - 11 percussion drill holes

1980, 81 - 13 diamond drill holes (Orbex Minerals Ltd.)

1984 - Soil sampling (Fox Geological)

1985 - Soil sampling, prospecting, mapping (Dome)

1986 - 17.2 km. of spectral IP (Dome)

Proposed Work

It is proposed to drill test the coincident geochemical IP target with 1,524 metres of percussion drilling.
