1973 - Cities Services Minerals Corporation

staked A+E claims in August 1973 over
dussumery py. mineral west main MoS₂ along main & strike faults
in granodiorite

B: granodiorite with Qtz-fsp perthite dykes & localized
Qtz hblt gneiss - pervasively py.

very steep & precipitous

- 152 soil, soil & mainly rock samples using aerophoto control
250 Cu anomalous high of 206 Cu & 19 Mo in rock
22 ppm Mo anomalous & 352 ~~Cu~~ 96 ppm Mo in soil

selective sample ran 1.85% Mo.

225

.081% best assay Mo
2000
16 2000

previous work.

1971 - Pacific Petroleum - JB claims

- geol mapping - outlined low grade MoS_2 deposit
1500' x 600' - first staked in 1970
mapped on 1"=1000' & 1"=400'

small irreg bodies of Qtz Monz & impure dykes
of variable comp & tex includes gneissic clasts & irreg
br granodiorite

Qtz Monz - 10-20% py - weathers gossanous

Mo in grey qtz veins & veinlets in most granitic rxs

- fract & joint controlled - grade related to fract density
estimated avg grade of 0.03% MoS_2

Mo also as micro veinlets along joints & fract & disse in
few places
