Name	Location	M.D.	No. of Units	Map	Metals	Prod. Tons	Geological Comment
(1) BADSHOT Black Prince Mohican	Gainer Cr. 15 mi. by road N.E. of Trout Lake.	Slocan Rev.	38	82K/11W	Ag. Pb. Zn. Au.	54 30 9+	Veins in Badshot Limestone & Index phyllite & argillite. Good silver values. Shipments in early 1900's. Access by 4 wheel drive to Perry Lode Cr. then cat trail. No modern exploration work.
(2) BISMARCK Gold Cure	Keen Cr. 12 mi. by road W. of Kaslo	Slocan	28	82F/14E	Ag. Pb. Zn.	957 20	D.S. Evans, Ph.D., P. Geol., recommended diamond drilling in his October 1984 Report. Veins and replacement ore in a syncline in Slocan Sediments underlain and flanked by Nelson Batholith. Small Cabin. Good silver values. High geochem results.
(3) COMMONWEALTH	Hooker Cr. 15 mi. by road E. of Crawford B.	Slocan	44	82F/10E	Ag. Pb. Zn.	8+	Quartz veins & stockwork & dissemination in sediments of Horsethief Formation. Good silver values. Numerous surface workings. Access by logging road & 4 wheel drive road. 2 good cabins. Recommended drilling in 1982 report was not done.
(4) GREAT DANE	St. Mary R. 30 mi. W. of Kim- berley	Fort Steele	32	82F/16W	Ag. Pb. Zn. Cu.	none	quartz veins in Creston argillaceous quartzite underlain by the Aldridge formation. No modern exploration. Good road to within 1/2 mile of main showings.
(5) IVA FERN	Cultus Cr. 35 mi. by road S.E. of Nelson	Nelson	4+ (3)	82F/7W	Ag. Pb. Zn. Cu.	none	bedded veins near contact of Monk Formation sediments and Irene Volcanics intruded by shonkinite, (Geology revised in 1983 - G.S.C. - O.F. 929). Lots of work done up till 1930 when access by trail only, now good road within one mile. Proven ore body. Plan of underground development.
(6) KING SOLOMON GoldCrown	Sitcum Cr. 15 air mi. N. of Nelson	Nelson	12	82F/11W	Au. Ag.	23 42	quartz veins in granite of Nelson Batholith. Same dip and strike as adjoining Alpine Mine that produced 11,413 ozs. of gold from 17,095 tons. Alpine Mine road could be repaired for access at a moderate cost.
(8) MAMMOTH Actinolite	Barrett Cr. 17 mi. by road S. of Nelson	Nelson	100	82F/6W	Mo. W. Cu. Au. Ag.	none?	Hall Sediments and Rossland Volcanics intruded by granitic stocks and plugs. Disseminated copper & molybdenum with added potential of gold and silver. December 1984 Geochemical Report recommended further work.
(9) SILVER BEAR	Keen Cr. 14 mi. by road W. of Kaslo	Slocan	4	82F/14E	Ag. Pb. Zn.	500+?	veins & replacement ore in a syncline in Slocan Sediments underlain & flanked by Nelson Batholith. No modern exploration. Claims adjoin good gravel road. Includes part of Index property. Further work recommended in November 1984 Report.
(10) STEWART	Ymir- 4 roads lead to pro- perty from paved highways near Salmo and Ymir	Nelson	212	82F/6W	Mo. W. Au. Ag. Pb. Zn.	4000+?	porphyritic quartz monzonite systems carrying Mo. & W. Skarn bearing W. Quartz veins, shear zones containing au. & ag. Many pb., zn. & ag. showings. Hall Sediments & Rossland Volcanics intruded by granitic stocks & plugs. Good potential for as yet undiscovered gold deposits. Includes Clubine Comstock, Gold Hill, Arrow Tungsten, Stewart Molybdenum, Free Silver, May Blossom, Lion, etc. Could be divided into separate packages.
(11) WALL	LaFrance 14 mi. by road E. of Kootenay L.	Nelson	16	82F/10E	Ag. Pb. Zn. Ba.	none	Dutch Creek, Mt. Nelson and Toby Conglomerate Formations intruded by greenstone sills & dykes probably related to Irene Volcanics. Over 2000 feet of underground workings. Sinkholes. The owners feel that the property has considerable potential as yet unproven.
