RE CLAIMS CH10-16

NTS 93F7/E & 93F8/W

I HAVE HELD THESE CLAIMS FOR A NUMBER OF YEARS, OPTIONING THEM TO PLACER DONE AND LATER TO ORUANA.

SOME SUCCESS WAS ACHIEVED IN LOCATING A SMALL LOW GRADE Cu, Au DEPOSIT BY PLACER. ORUANA HAD SOME LIMITATIONS AND WENT TO THE WEST. THESE REPORTS ARE AVAILABLE FOR PERUSAL FROM MYSELF AT 540-2579 UNTIL MAY 1/00.

EXPIRY DATE IS PRESENTLY OCT/2000.

I HAVE DONE THE WORK ON THESE 73 UNITS & FOR THE PAST TWO YEARS.

IN RETROSPECT, MY OWN INSTINCTS LED ME TO BELIEVE THAT DESPITE MORE SHOWING IN THE TRENCHING DONE BY RIO IN 1969/70 THAT THE MAJOR COPPER, GOLD NO. ZONE WOULD BE LOCATED S/E & EAST OF THE PREVIOUS WORKINGS.

MY ORIGINAL SAMPLE OF 10,000+ Cu + 4400ppm Au AS WELL AS LESSER VALUES SUBCROPPING TO THE EAST 1500 Cu, 750 Au, 44% Cu 200 Au, IN ADDITION TO THE LARGE INXIM GRANODIORITE CONTACT BOULDER 3400ppm Au, 800 Cu. (EXTREME SE) LED TO THIS CONCLUSION:

SUBSEQUENT LOGGING HAS CLEARED THE GROUND FOR CLOSER EXAMINATION AND INDICATES THAT SOME CONCLUSIONS DRAWN BY OTHERS ARE ERRONEOUS IN THAT GLACIAL TILL (A LOT OF WASH) DID NOT DROP THESE ROCKS FROM AREAS TO THE WEST. NOTED ALSO IS THAT

THE PRESENCE OF GOLD WITH COPPER IS PROPORTIONATELY HIGHER IN ROCKS (PARTICULARLY GRANODIORITE) TO THE SE. Mo IS HIGHER TO THE NORTH CENTRAL AREA WITH SOME COPPER.

A VERY ANOMALOUS GOLD, COPPER SOIL ANOMALY WAS DELINEATED BUT OTHERWISE UNEXPLORED TO THE EAST AND A SOIL ANOMALY (10 SAMPLES) EAST AGAIN OF THIS TAKEN BY MYSELF SHOW ANOMALOUS CONCENTRATIONS OF GOLD (HIGH 150) Cu, Mo, W, Zn. THE LARGE Cu, Au BOWDER FOUND TO THE SOUTH OF THIS IS IN FAIRLY SHALLOW OVERBURDEN AND LIKELY INDICATIVE OF A LONG TONGUE OF GRANITE EXTENDING EASTWARDS (MORE OR LESS OR ISLANDS) ACROSS THE WESTERN END OF CHUTANLI LAKE.

THAT MORE OR LESS SUMS UP MY VIEW OF THE Cu, Mo, Au ANOMALY CONDITION ON CH 10, 11, 12 13.

WITH RESPECT TO THE APRIL OUTCROP TO THE WEST, A SMALL HIGH Zn, 2-4 gms Au VEIN 5-10' X 80' (I DUG SOME OF IT OUT RUNNING NORTH/SOUTH)

ANOTHER MINERALIZED VEIN WAS DUG UP BY MYSELF ABOUT 400 METRES SOUTH OF THE APRIL OUTCROP. IT RAN $\frac{1}{2}$ TO $\frac{2}{3}$ Zn, $\frac{1}{2}$ Pb, 100 ppm ~~SILVER~~ SILVER AND $\frac{2}{3}$ GM GOLD. OBVIOUSLY SHOULD BE TRENCH^{ED}. AN OUTCROP TO THE EAST OF THIS RAN 385 Au.

AN AREA SOUTHWEST OF APRIL ABOUT 1 KM AND PROBABLY ALONG A FAULT N/S

WAS EXPOSED BY LOGGING AND GIVES HIGH
VALUES IN AS, CU SAMPLES (SUBCROP) ON
THE OTHER SIDE OF THE KUSKUS RD AAN
750, 1900, 1700 Au WITH VALUES IN ZINC.

THIS IS POSSIBLY A PERIPHERAL MANIFESTATION
OF A ~~LOW~~ GRADE Cu 1500Cu, 50Au PORPHYRY
TO THE SW AS WELL AS BEING VERY CLOSE
TO THE GRANITE CONTACT.

PERMITS ARE NOT DIFFICULT TO GET
AND THESE AREAS ARE EASY TO TARGET
AT PRESENT.

SHOULD YOU WISH FURTHER INFORMATION
WITH A VIEW TO AN OPTION, FEEL FREE TO
CONTACT ME AT 540-2579, NATHAN KENCAYD.

YOU ARE GUARANTEED SOME INTERESTING
AND EXCITING RESULTS AT REASONABLE COST.
