REPORT ON PROPERTY EXAMINATION  
GOLDBRIDGE, B.C. (N.T.S. 92 J)

INTRODUCTION

During the course of the current exploration season, Mr. Ed Szwagrzyk of Goldbridge, B.C. brought a copper prospect to our attention. The presence of our helicopter in the area on September 16, 1977 facilitated a brief (1 hour) examination of the principal showings. The author was accompanied by Mr. Szwagrzyk to his showings which occur some 5.5 mi. west of Goldbridge on Mt. Penrose at approximately 5500' A.S.L. (Fig. 1).

GEOLOGY

The showings are located on the south side of Mt. Penrose on a slope which would probably average  $20^{\circ}$ . The showings are divided into an upper showing  $\sim 6000'$  A.S.L. and a lower showing  $\sim 5500'$  A.S.L. Malachite staining on the showing is visible on vertical cliffs from the air. The showings are wholly confined to massive andesite-basalt flows showing little or no alteration and very little fracturing. The two showings, which consist chiefly of malachite stains along joint planes, are characterized by disseminated pyrite with minor chalcopyrite. Large areas of rock between the showings are barren of sulphides and the showings themselves I believe, are quite local. Assay 683 WW represents a chip-grab sample over 10' of the lower showing which

ran 0.23% Cu. Assay 684 a chip-grab sample over approximately 10' ran 0.39% Cu. Assay 685 WW which returned 3.92% Cu was high grade (lower showing) from a narrow 2" seam of 40% pyrite with chalcopyrite. This joint filling was one of the few observed in the area of the showings. The property was turned down on the basis of size limitation and grade.

The showing is an old one as our helicopter pilot recalls visiting the same outcrops some years ago with another mining company.

SEMI QUANTITATIVE SPECTROGRAPHIC ANALYSIS

The multi-element analysis was run on a single specimen of skarn with an unusually high specific gravity. Mr. Szwagrzyk presented the sample with the idea that it was uranium bearing (location unspecified). No minerals of economic significance were shown as the multi-element analysis indicates.
