

Target

77CB 8 ✓

Graded bedded, grey fragmental to tuff, white ~~sp~~ rhyolitic matrix
- mainly grey to buff siliceous rhyolitic frags.

77CB 64 ✓

Light greenish grey fg tuffaceous volcanic
Subangular to rounded grey glassy fragments.
Indistinct light olive greenish (sericitic?) glassy shards
rectangular to irregular frothy.
Irregular black Mn stain on surface
Disseminated py in matrix & in green fragments.

77CB 16 ✓

Grey - reddish grey granular porous 'alaskite'
Dissem fine black mineral, non magnetic, shiny
perfect cleavage on occasional larger specks, streak
black ?? otherwise looks like fine specular hematite.

XCS SWAB 4W ON ✓

Alaskite breccia - fragments sharp angular pinkish
grey fg porphyritic in appearance but with fine
shard like crystals as well as feldspar phenocrysts
Matrix of fine angular fragments, light grey rhyolitic
material, cavities with fine shiny black mineral
as above in CB 16 (relatively rare) and lined with
small crystals - ^{doubtful} quartz? - openings coated with
fine limonite.
No feg anywhere with HCl,  gypsum?
Minor Mn stain.

77CB 47 ✓

White to red spotty to banded rhyolite - flow?
banding in larger fragments, matrix contains small 2mm
- 4mm orbicular white fragments. -
Cavities lined with ~~to~~ brown limonite.

77CB 59 ✓

Light tan grey fg porous tuff - cavities small with
black shiny specks, siliceous shards, fine orbicular
spots - - assumed f.g. rhyolite tuff.

77CB 26 ✓

Reddish brown fine fragmental - small angular to
rounded fragments of varied nature in fine ~~poorly~~ tuffaceous
matrix (with collapsed gas cavities?). Little Mn stain

77CB 28 ✓

As CB 26

E of TAC 356 (No 787.6) Grey fmg gtz deonte, slightly greenish, little dissem mag + kblende
