

Manson Creek Gold in Tekt Channels

093N/9

Later Ice sheet - Mtn Pass - breached.

Under glacial river - carried gold from Manson  
Channels south to this area

Manson gold ragged - gty inc

This gold some ragged mainly rounded  
and is on the surface.

about 60' below surface 2-3' pay streak  
may be Tertiary and is on bedrock

Supposed to be old adit at lake level

Surface rises in benches to plateau - 500'-700'  
across, littered with boulders,

Amorinde has ground looking for Au  
in schists + sed. Now drilling on sed.

OPEC group - Blackjacks Mtn - will drop  
part in in treasure.

Boulder Creek into west side lake - working  
South of Creek 700' above mouth bend of creek.

Pass from the north thru S flowing part  
Boulder Cr to Manson Cr - material from  
north.

Gold 5m W under large boulder
