CAMP CHARLIE

CAMP #6

DATE: July 8th-13th/73

LOCATION: Northeast of Tabla lake, West of Omnicelt's creek, on Lion claim group.

MAPS: 93M/16E, 1" = 400' sketch.

AIRPHOTOS: BC 1581: 85, 84, 86, BC 2067: 103, 104.

SILT SAMPLES: Y-507 - Y-518, Y-422 - Y-443. 34 SA.

SOIL SAMPLES: C-1 - C-122 122 SA

CLAIMS STAKED: Lion 5-14. 10 claims

MINERALIZATION: Abundant pyrite in most rx types depending on degree of alteration, ^(oxidation, etc) shearing and weathering. Another chalcopyrite showing was found southeast of the main showing - more extensive but lower grade. This #2 showing also seems to be bounded by large (modestly) shear zones. It occurs (JS-73-7-13-6, etc) in a black and ^{+ mudstone?} coloured by abundant black chlorite along fracture surfaces. There is a small ^{intrusive} zone of rocks probably present as a dyke (JS-73-7-13-6). A small adit has been driven below an intensely oxidized band that shows up near the top of the cliff. Other mineral occurrences were noted in the camp #5 report. An interesting pyrite rich rock is JS-73-7-12-2 - a black limestone with pyrite.

GEOLOGY: See Geology Map of LION Group
