Re: D.C. Syndicate - Jean Project

Dear Rags,

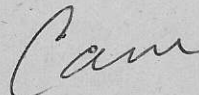

The enclosed is a print of a rough tracing I have just made from airphoto overlays in prospectors notes from 1970. The more significant anomalous silts were shown on the base map for that area.

I have never been over these two air mag structures myself. The soil sample results and some silts are higher than usual. No other elements were run apparently.

This is for your information in case you wish to check the area. (Perhaps you have already done so).

If you would like to have the samples to run other elements we can have them sorted out.

Best regards

J.C. Stephen
