Orville Baker tells me they have encountered about 110' of 0.60% + Cu in the last drill hole on this property. Will average about 0.5% over 160' + stopped in 0.4%.

Some 7 or 8 other drill holes approx 150' in length each at odd locations & queer angles ran about 0.2 - 0.3% Cu

They are flooding a security issue at 80¢.
