② Small area of
intr. only 7% mag⁹⁰
b- med granod
→ basalt
but fairly
at

④ f gp = dioritic - not quite
grades to lighter colored r.
now dr r.
jointing 5°/40

- is actually the old
phenos not visible except on weath surface.
jointing 15°/45E

⑩ f-med gp. dioritic intr.
smooth, rusty weath surf.
well jointed 38°/70.
more felsic towards E. end.

⑪ gfp
near top of gully. v. rusty, gte doming
pt.

① f-med
40-50% gte } ? Granodiorite - diorite
5% mica } 30
rusty fracture surfaces } 20% mafics

Rep sample GRI 20!

jointing 20°/35° and 16.2°/80°

② rusty, silty, intrusive with dr veins, minor phos?
some Mn staining, intr. f-med, pinkish col.

③ same as ①
jointing { 156°/70
{ 81°/90

④ rusty gte floor

⑤ B-125, etc of ①? med gp. hrd + pt? mafics
NB - could this be the missing diorite?

⑥ green col & f gp. andesites, slightly amygdaloidal

⑦ aphanitic, sugary, slightly chloritic pinkish grey -
green col, rusty weath. GRIZZ 2
