

August 1/82. M. Webster Key Claim Group.

Update:

- ① Mapped & sampled ridge west of claim group.

General geology:- quartzite schist & qtz veins

volcanic porphyritic dykes 2-3' wide cut schist  
foliation discordantly

- many strikes & dips measured in hope of either  
local or regional correlation to folding or  
intrusion pattern

- samples at broad intervals

- ② Stadia survey & sampling of central ridge

Geological mapping & rock sampling underway. Completion  
estimated in 3 days.

Precise location of quartz veins, schist outcrop, ~~and~~ rock  
sample location, claim posts and grid lines are surveyed.

- ③ Stream just east of camp running south shows considerable  
outcrop. Stadia survey will encompass these points and  
terminate at point of survey origin.

- ④ Soil sampling: Grid: BL 10+00W 00+00S to 15+00S

Sampling done at 50M intervals with lines 100M apart.

The samples are both talus and soil as vegetative  
cover is shallow with much loose rock cover

- ⑤ Rock geochem - all samples Ag & Au

Soil geochem - samples As, Au

Talus geochem - samples Ag, Au

- ⑥ All corner claim posts found.

- ⑦ Base Map is being plotted daily as survey is done.
