134° 35' W 59° 40' N

③

The claim units split approximately in half by a ridge rising () metres above the hcp. ~~The~~ ridge runs nearly north south ending at Teepee Pk. The Teepee Glacier is located approximately 3/4 of a km from 4W 3S corner post. ~~The~~ A stream near the west border of the claim drains the glacier and snow fields and flows in to the Racine Creek. Treeline is entirely below the claim boundary; vegetation is primarily grasses and mosses with some alder bushes to the east boundary.

④

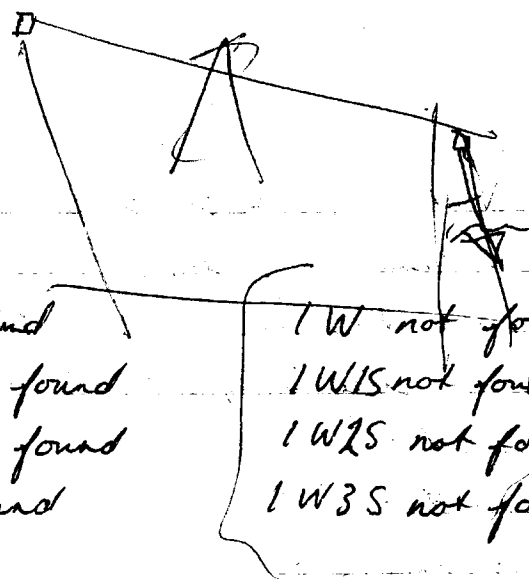

Access to the key claim units was by Keystone Helicopter Ltd from Athin ^{direction} kms east ~~km~~. The Yukon and White Pass Railway line is located 12 ~~to~~ miles west of the claims

Geology

Mapped & sampled (1) ridge west of camp
 quartzite schist & qtz veins

schist is very convoluted. Many strikes & dips have been taken in hope to corrolate general trends of a folding pattern either locally or on a more regional scale. Samples taken at broad intervals ^{to indicate} ~~to~~ mineralization _{is quartz veins.}

(2) central ridge of claim group is presently being ^{stadia} surveyed; geological mapping and rock sampling is underway. Samples ~~usually~~ ^{usually} taken locations are measured exactly during survey. Soil sample grid & claim posts ^{are} ~~so~~ also surveyed. ~~to~~

(3) east side of central ridge has been entirely walked. Rock samples collected. Mapping will be ~~completed~~ ^{now} tied to survey points

(4) stream on west side shows considerable outcrop. Many strikes & dips measured. Stadia survey will cover the stream and terminate at point of survey origin.

(5) soil samplings; Grid; BL 10+00W 00+00S to 15+00S samples have been taken at 50M intervals with lines 100M apart. The samples are of both talus and soil as the vegetative cover is shallow with much loose rock cover.
