

JULY 13/81

ROCK SPECIMENS

NAHLI MTH (ALPHA)

- 27601 - Sheared altered rock - probably related to ultra-basite with qtz carbonate veining, some cavities no mineral.
- 27602 - Rusty weathering grey f<sub>g</sub> crystalline? rock. fine dissemin pyrite? or pyrite. Non magnetic.
- 27603 - Dark f<sub>g</sub> altered rock ?? Fine py + cpy mainly in zone with apparently introduced carbonate. Fairly basic looking rock. non magnetic.
- 27604 - Rusty weathering siliceous rock with fairly abundant py and some cpy.
- 27718 - Very rusty weathering very f<sub>g</sub> dark blue grey andesite?? with fair amount fine dissemin py.
- 27719 - Dull white + black f<sub>g</sub> hornblende diorite - very little py
- 27720 - Fine amorphous olive green serpentine? with white qtz carb veining
- 27721 - Dark grey finely brecciated sediment? veined by white to grey quartz. Some silicification.
- 27722 - Mainly qtz carb surrounding frags siderite minor garnetite.
- 27723 - Well banded, some comb structure white to slightly rusty weathering quartz carbonate. Minor garnetite
- 27724 - Rusty weathering f<sub>g</sub> greenish grey altered siliceous rock with very minor quartz veining (No fizz) - little scattered py - non magnetic.
