

ROCK SPECIMENS

ALPHA

NAKINA LAKE

JULY 13/81

27605 - Nearly black chert. Slightly fractured, Fine pyrite  
on fractures.

27725 - Black cherty sediment brecciated and quartz  
veined. Rusty weathering no visible sulphides

27726 Blue grey black shaly sed. ~~some~~ somewhat platy  
& phyllitic (no mica) in structure with black chert. Iron  
stained.

27727 Black hackly siltstone with fine pyrite as grains  
and very small nodule like concentrations.

27728 Dark grey massive non magnetic granular rock -  
looks like f.g. diorite - no fizz. Slightly iron stained.  
Very little fine py. Crew called this volcanic greywacke  
- is from small float in "trench".

27729 Dark grey to black f.g. hackly siltstone
