Only the three air photos circled are provided as you have some for this area and Echo have those to the north and west. Keep the photos you have.

Would like you to prospect in the vicinity of the small intrusive north east of Ear Mtn, south of Shaker Creek. Dupont have the SHAKER claim some distance to the south west of Sunday Pk - probably based on sediment sampling for Au.

If too much snow on the north slopes concentrate on the headwaters & north of Graham Creek.

You will be coming out to go to LUNA June 21 or 22.
