

TARGETS

① WEST SIDE LONG LAKE.

Copper Mineralization is reported to be on rocky point, west side near north end of lake.

Valleys to the west to be ~~pro~~ prospected

The most northerly trenches east of the middle of Long Lake do not appear to be staked.

High ridges east of north end of Long Lake should be rock geochemed on a very wide spacing for Au As. as a possible source for gold in Rosella Creek placers. Are quartz pebbles ~~conglomerates~~ conglomerates present which may have been fossil placers.

Proposed Camp - near trail 1/4 mile north of Long Lake - swampy area?

Need photo RC 5682 - 126 which Audrey has now. Aug 3
