

* Mined areas probably covered, inaccessible
77 vein

673020
Bralorne

4300 level.

4 - 60° holes fanned from 79 drift
to cut "77" at $850 \pm$ below 4300 level,
i.e. $500 \pm$ below 4500 level.

500' of drilling in 4 holes fanned
from one station.

750' of drifting on 4300. Vein
narrow to west, is faulted to E and
some gaps. 240' of real wide vein.

* Some small amount of raising
to accommodate 20 pull*.

4200 level

500' of vein tapering at both ends
Mining right hand branching No work
No looking for "103".

4100 level.

Adequate exploration - on 79 as
well. First appearance of 77 HW (split)
Not drifted on.

Hole 41Q153 (-90°) hit 8.8' - 0.59 g. Au at
depth of 116'. So called "103".

Hole 41Q154 () did not hit "103".
(No 4000 level).

3900 level.

No drilling S of Queen Shaft for pos. "103".
Nothing done on "79".

"77" pretty well explored, particularly ESW.
77 HW split not drifted on.

One good "77" shot - 200' - 6.5' - 0.51 g.
Another 155' - 34' - 0.62 g.

3800 level

77 - good length > 1000'. Pos. various drift.

* 79 - things then below. Some mining

* 77 HW split. Some mining.

* SO FAR, VERY LITTLE EXPLORATION IN
H.W. OF #77. F.W. HAS BEEN EXPLORED RELATIVELY
WELL, PARTIC. BY XC FROM QUEEN SHAFT.
