Bacon and Crowhurst  
Consultants  
#1720 - 1055 West Hastings Street  
Vancouver 1, B.C.

Dear Mike:

Mr. Pentland and I wish to thank you for the excellent tour of the Quatam River property of Capilano Explorations Ltd. (N.P.L.) on May 13, 1970. Returned herewith are the reports and maps on the property.

Results of the sediment samples on Copper Creek are outlined below.

	<u>#75</u> (above road)	<u>#76</u> (below falls)
Cu	62 ppm	63 ppm
Mo	4	8
Zn	88	92
Pb	20	20
Cd	0.9	0.8
Ni	5	4
Co	8	10

Analysis of the best mineralized float specimen was Cu 1.16%, Mo 20 ppm, and Au <.03 ppm.

It is felt that the size potential and grade especially within the breccia zone is not sufficient to warrant our participation at this time. The breccia zone may still show promise and, to this end, we wish you every success.

Yours truly,

CANEX AERIAL EXPLORATION LTD.
