Mineral Sciences Division,
555 Booth St.,
Ottawa, 4, Ont.

Attention: Mr. D.C. Harris

Dear Sir:

In answer to your letter of August 14th, I am sorry to say that there is at present no work at all going on at the Anchor-Takla Mines property from which the sample was submitted.

Should something develop, however, in the next month or so we would be only too glad to send you some more of the same material.

The samples that you received were taken from surface trenches at the Takla Silver property north of Fort St. James, B.C., at 55°30' North Latitude and 125°30' East Longitude, in the Manson Creek area. These surface trenches were cut at approximately 50' intervals across a 250' strike length of a vein-like structure.

Let me know if you need any further information.

Yours truly,

BACON & CROWHURST LTD.

J.J. Crowhurst
