Mr. W. R. Bacon
Bacon & Crowhurst Ltd.
1720-1055 West Hastings Street
Vancouver 1, B.C.

Dear Sir,

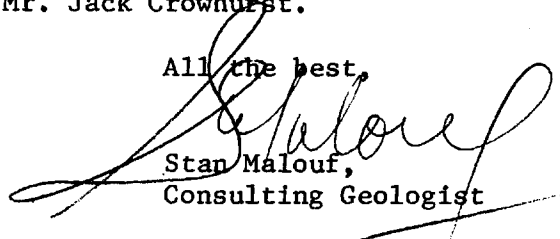

Thank you for yours of March 7 and a sincere apology re thinking that J. J. Crowhurst was the chap with telephonitist. I scribbled my note off to you in haste and didn't realise that J. J. Crowhurst is your partner. I remember meeting him with Karl Springer.

I don't know how we can run down the chap that is representing himself as me. He is sick and I believe dangerous.

You will be amused that I received another report on the property by C. M. Campbell with another bill for services. I'm enclosing a copy of Mr. Campbell's letter hoping that you Vancouverites will not think I'm the one that is mental. If you can do anything to stop this guy, whoever he is, I'd appreciate it very much.

Thank you for your brochure and kindly extend my apologies to Mr. Jack Crowhurst.

All the best,

Stan Malouf,
Consulting Geologist

P.S. I compared notes with Brodie Hicks at the Prospector's Convention and got filled in on his side of the story. Brodie got fired by our mythical Stan Malouf before he hired you. He has however also hired C. M. Campbell. I suspect he must be someone who knows me and knows the Afton property.

Dear Mr. Campbell,

As you will notice from the enclosed data you are the victim of someone that is misrepresenting me and is probably mental. Any help you can give us in running down the individual responsible will be greatly appreciated.

Enclosing my reply to Bacon & Crowhurst re the same problem and subsequent correspondence. My sincere regrets at your inconvenience.

Sincerely,

S. E. Malouf,
Consulting Geologist

RE: AFTON MINES LTD.

Dear Dr. Malouf:

Following your telephone call early Sunday morning, February 20th, I called Mr. Chester Millar, the company president, and arranged to visit the property on Wednesday, February 23rd.

When I reached the property, he refused to allow me to see the core, although this had been agreed upon earlier. However, he did agree to let me see his records in Vancouver and it was understood that we would meet on the following Monday. Unfortunately, he has continuously avoided a meeting with me and accordingly, I am not able to produce a report for you. Mr. Millar seemed very concerned that somehow or other providing me with information for a client might result in "short sales" on the market.

I am attaching two location maps. The geological map shows the mineralized area to be within the intrusive rocks immediately south and east of the volcanics.

The drilling program includes percussion holes at 100 foot centres to 300 feet of depth and diamond drill holes at 400 foot centres to 800 feet of depth. The diamond drill is following the percussion drill. The program is limited so far with D.D. Holes over a horizontal east west distance of 1,200 feet and a north south distance of 800 feet. The work is east west and south of the lake shown in Lot No. 1595.

Based on conversation with Millar and others, I believe the rock to be an altered brecciated micro diorite and the mineralization native copper and chalcoppyrite. I also understand the mineralization is not consistent.

I am sorry I have not been able to obtain more complete and useful information. Dr. W. R. Bacon who perhaps you know, is familiar with the situation and I suggest that he is the one person who might be helpful to you.

I am enclosing my account covering my trip to Kamloops.

Yours truly,

C. M. Campbell, #205, 235 Keith,
West Vancouver - 926 1104

Dr. S.E. Malouf,
Consulting Geologist,
Ste. 310 - 55 Yonge St.,
Toronto, 105, Ontario.

Dear Dr. Malouf:

Thank you for returning my report on Afton Mines and writing a note in explanation of your side of the situation.

I would consider the matter rather amusing, were it not for the implication that my partner, Mr. Crowhurst, a highly respected, mature, stable, mining consultant, was somehow involved in a hoax. The fact is that he was called at 3:30 a.m., February 20th by someone purporting to be you. On Monday morning, after consulting with me, Mr. Crowhurst phoned your office in an attempt to confirm the earlier phone call. He was advised by your secretary that you were in Arizona and your office gave us an Arizona phone number. Mr. Crowhurst tried the Arizona number and received no answer. We mulled the situation over for a day, considered the possibility of a hoax, and then decided that we would go ahead in spite of the unusual circumstances.

I am enclosing our brochure and would be very pleased if you would check on Mr. Crowhurst with Jim Redpath of Dome Mines, Fred Hall of Canada Tungsten, Joe Rankin and Trevor Horsley. Otherwise you may retain some suspicion of our consulting firm. Should you wish to check on me, the same names could pass on my integrity as would George Langford, Murray Watts, Duncan Derry and a host of other professional men whom I know well from my days in Eastern Canada some 25 years ago.

In closing, I might add that you have my sympathy in the present situation and I can only hope that you are able to terminate it satisfactorily in the near future. At least I can be amused by the fact that I went through the exercise of preparing very carefully a report which I am sure I will find handy in the future.

Yours very sincerely,

BACON & CROWHURST LTD.

WRB/ic

W.R. Bacon

P.S. Jack Crowhurst, who has been away almost continuously since this matter arose, did mention that he had met you with Karl Springer in Toronto once. Jack was Vice President of Karl's Highland Bell and Canada Tungsten operations during the 60's.

Sorry

You have been taken in, I believe, by Mr. Crowhurst who Dadon't know, never heard of him before, ~~but~~ someone who contacted Brodie Hicks at 3.A.M. one morning with the same story - requesting Brodie to review Afton Mines for myself and Bud Knight. Brodie phoned me next morning to confirm the call - the lad said he was San Malouf but Brodie didn't think it was me or if it was that I would have to be drunk to call him at that time -

I have been bothered by someone over the last six months telephoning me collect from Vancouver - giving his name as Jim Scott - Slim Gilleanders or other people that he was sure I knew - we got taken in once but refused calls since

and I suspect we're a little closer to finding out who it is ~~know~~ - The same man called once from Toronto - drunk - when I was away and was insulting to my wife suggesting that he would come over - again 2 or 3 AM -

My son is in Vancouver and will contact Mr Crowhurst personally and try and get some answers - whoever is responsible for these telephone calls may well be the same man who has asked you to do this report. He is sick - and may well do someone harm somewhere along the line. He'll be a lot sicker if my son catches up with him -

CONSULTING ENGINEERS

February 24th, 1972.

Dr. S.E. Malouf,
Consulting Geologist,
Suite 310 - 55 Yonge St.,
Toronto, 105, Ontario.

Dear Dr. Malouf:

Mr. J.J. Crowhurst has asked me to prepare a report for you embodying what I know and think about Afton Mines Limited.

Our first association with the property was in 1970 when the firm served as consultants for Great Plains Development Company of Canada Ltd. One of our geologists, Mr. G.D. Delane, logged and split for assay the core from 5 Afton NQ holes drilled in 1970. Two of these holes, 70-3 and 70-4, are pertinent to any appraisal of the Afton property.

During the period April 12 - May 13, 1971, Quintana Minerals Corporation undertook a program of mapping, rock geochemistry and percussion drilling on the Afton property. On the basis of this program, Quintana concluded that there was no room on the property for a porphyry type copper/molybdenum deposit.

In the autumn of 1971, Mr. C.F. Millar, P.Eng., President of Afton Mines Limited, initiated a percussion drilling program in the immediate vicinity of diamond drill hole 70-4. When 18 holes had been completed and some of the cuttings assayed, the writer was asked by Mr. Millar to prepare a progress report on the property. The writer did so and recommended a further program of twenty 300' percussion holes plus six 800' diamond drill holes at a cost of \$102,396.

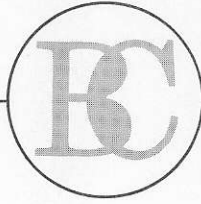

As of February 21, 1972 Afton has drilled 58 percussion and 4 diamond drill holes in the current program.

Respectfully submitted,

BACON & CROWHURST LTD.
