May 8, 1981

Mr. Gerry Auger, P.O. Box 1055, Smithers, B.C.

Dear Gerry,

Enclosed are two maps for your information. Map I shows the initial silt sample results for copper and molybdenum. Only a few coppers were over 90 ppm and are marked in pink. Values for Mo from 5 ppm up are marked in green.

We staked the area as the Chek group and did more sampling My memory was that we had more Mo results but that is not so. There are some high Zinc marked in orange, high Copper marked in red, no Molybdenum to speak of, weak Silver and some quite high Lead. Hope this will still be of interest to you.

Sorry for all the delay.

Best of Luck
