Fred Clavin
Group 93L/16

Sweet Terry

Ho! Ho! what an original name for claims Fred, the poor bastard, but I guess it suits him right for finding a qtz vein of .35 cu in the middle of the worlds largest unspatial reserve of PINK GRANITE. Ran the soils and the almost measured up to the background level of the silts. On the sketch I would have included long and lat but we don't have any long + lat maps that cover the area we are in.

We'll send in the photos complete on Monday when we go to see the mine - no mine, no photos.

Thank again for the plywood, it sure makes working around here a lot more comfy. Would it be possible for me to exchange the company-owned 10x handlens in my possession for a 20x company owned handlens him? And I presume you will have exchanged the kerosene lighter fluid for real fluid lighter fluid - any brand will be fine.

By the way I chose 225° for the c.h. cause it points to the place where my heart is - Tophy handling. The fossils are in the shittiest swamp you've ever seen.

On the day we go see the mine, if we do, would it be possible to get into base for a shower, preferably before the four but afters would be acceptable.

See You Soon.
