Re TSEE CLAIMS 1040/16

Visited Bruce Waver re TSEE. He was on ~~property~~ property 4 or 5 days this summer - revamped stratigraphy - graptolite rich beds = ROAD RIVER Fm separated by curving fault from black shales ~~to~~ along fault line on east side of zinc rich ankeritic knob in ridge saddle.

Horizon with zinc & barite on lower contact of western black shale thru rusty gossan material mapped in 1981.

Possible tractor trenching or Ditcher? drilling to be proposed for 1983.

Midway silver rich horizon is probably down dip extension of old Silver Top property. ^{stratigraphically} ~~stratigraphy~~ higher strata bound lead zinc apparently pinched out.

Tonnage guesstimate < 6,000,000 tons.

Staking done south to Little Larcheria River.

Dikell barite show at Captain Lake - McNamee?.
