

Jack. Not much that I can add in the way of core being logged. Only that from

(No 1 Hole) 286' - 295' There was very poor recovery. But there was no sign of ore.

You did survey Hole # 1

Hole # 2

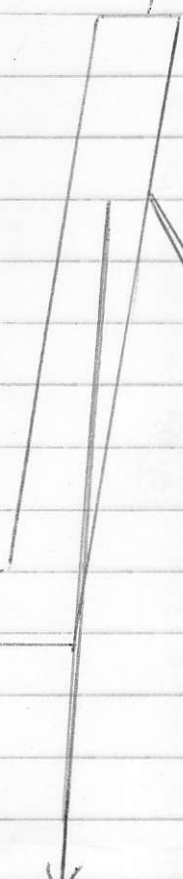

You said that Hole # 2 was just below and past the upper drift. (remember)

I hope that my sketch gives you some idea of the Leds. Also I hope that this corresponds with what I marked on the holes underground.

Regards

George
