Drilling has commenced at the Fish Lake Project. Three diamond drill rigs have started to delineate the ultimate size of the Fish Lake gold-copper deposit with three vertical holes already completed to depths of up to 2640 feet. One hole has been completed 1600 feet west of the initial 600 million ton reserve block, another 330 east of the initial reserve block and a third within the initial reserve block. All holes intersected visual copper mineralization, and drilling is continuing. The Company is considering moving additional drills to site. Assay results will be released as they become available.
