Dear Neil:

Here's a date on the little stock at the Robson property - Cairnes shows it on his map. This indicates that the UK-ET Bendon Trend probably extends NW well into the Taseko Lakes area, and dykes or plutons of this age could be associated with some of Jim Pawson's Au-rich porphyry-related showings such as Relay, Dash, Nad & Cheta - not to mention Fish L - Poison etc. If possible, I'd like to helicopter-hop on a few of these with a view to dating the intrusives. Would that be possible during a visit on July 14-15? Craig & Colm plan to arrive on the 12th, I plan to arrive on the afternoon of the 13th. I may bring my son Grant again. I hope there will be room to sleep on the floor.

Canada

Best regards

Jim.
