Ottawa K1A0L8

Dear Gina:

Enclosed are the 18 specimens for X-Ray
mineral identification. I've enclosed a copy
of their description and location. The majority
will be composed of quartz, several carbonate
minerals, muscovite / phlogopite plus talc, chlorite,
magnetite & chromite. Some of the green mineral
may be a carbonate (?). Please send a
copy of your results directly to the student
involved on a BSc thesis study: David
Newton, % Dept of Geoscience, U.B.C., Vancouver BC V6T 2B4

I will send duplicate directly to Chemex
labs in Van. for whole rock plus Cr, Ni.

If possible, Newton would like the results
by Xmas.

Canada

Many thanks

Kenneth M Dawson
