

Prime Equities visit  
Host Ralph Brown

VP Expln. Tom Foster

Proj. geologist - Rock n Roll David Mallo

VP chat Idziszek

Length of Rock n Roll zone drilled to date 600m  
open both ends, otherwise EM trends on to Consolidated  
Bel-Air Resources to E + SE.

Resemble Kutcho Ck. Relate volcanic, breccia  
material, increases to SE → proximal direction?

No limestone in section. Mapped as VT Stabine  
by Britten + Aldrich but doesn't resemble porphyritic  
units elsewhere.

Andesitic flow units interbedded with sulphides  
High Au, High Ag, High Cu Zn Pb zone - drift  
horizon(?) in 25m thick zone.

py - po - sph - gal - ep - in zone ~ 7m thick. No barite  
recognized yet.

Pb isotope looks like Kutcho or VT-eJ vars.

60-man camp going in spring 1991. SW  
of deposit.

Ag Pb Zn prospect adjacent to Pajunka mine  
- from (?) Comins.

Maple Resources (?) has porph Cu Ag prospect  
near Pudda Lake, Geminus area.
