

675210
Bullion Creek
104 I/07

Eldorado Minerals and BRX Resources conducted a \$400,000 drilling and surface exploration program on Queenstake's Bullion Creek property in B.C. Only a small portion of an extensive lead-zinc-silver anomaly has been tested, indicating a favorable geologic horizon for a stratabound lead-zinc-silver deposit. An evaluation is currently being done of this work and the results will likely be presented to several major mining companies.

Meanwhile on the Argus Gold ^{mmmm} property in California, exploratory work is continuing and negotiations are under way for major mining companies to participate. At the Gold King-Imperial in New Mexico, development and underground sampling have been completed on the ^{DCC16/82}
