Mineral Deposits of the Adams Lake - Barriere Area.

V.G. PRETO, B.C. Ministry of Energy, Mines and Petroleum Resources, and

G.J. DICKIE, MineQuest Exploration Associates Ltd.

Five main types of mineral deposits associated with the Eagle Bay/Fennell contact are discussed, viz Ag-Pb-Zn stratiform (Lucky Coon, Mosquito King), str.

bound disseminations of Cu-Pb-Ag (EBR, Harper Creek), massive sulphides with Au-Ag-Cu-Zn-Pb and barite (Homestake, Hilton, Birk Creek), U-Th in felsic volcanics and, Cu-Co massive sulphides in pillow basalts (Chu Chua).

Hilton = Red Gold
