

Crownsnest Au property Talk to Bill Marston Feb 13/03
mainly hosted by syenite - related rocks (? extensive)
in phreatic. Not known if related to Maye Intr.

Eastfield optioned to Larry Rae - at present partner.

Syenite is intrusive breccia with 1st clasts locally.
Similar alkaline intrusions near Elkford have diamonds.
looks like a diatreme locally.

Hawell property - Adjacent to Crownsnest. Some type
more differentiated Au in carbonate ~~sediments~~ sediments.
Syenite dykes, dikes.

Models - Parguera
Cripple Creek - alkalic magma at cratonal margin.
