For Immediate Release:

AFTON DRILLING ADDS TO MINERAL ZONE

Vancouver, June 6, 2002—Diamond Drilling on the Afton Copper-Gold Project has intersected significant copper-gold mineralization west of the mineral zone envelope boundary used in the 2000-2001 indicated mineral resource estimate of **37.7 million tons (34.3 million tonnes) of 2.32% Copper Equivalent**. (Reference: April 25, 2002 Press Release – Afton Mineral Resource Study.)

DDH 2K02-52 @ -45°/244, drilled above DDH 2K-14, **intersected 2.55% Copper Equivalent over a drill core length of 62 metres (203 ft)** within an overall mineralized core length interval of 100 metres (328 ft). The present interpretation is a possible widening of the high grade copper-gold mineralization beyond the previously indicated mineral zone boundary.

ASSAY INTERSECTION FOR DDH 2K02-52:

Core Length m (ft)	Depth M	Copper %	Gold Oz/t	Palladium oz/t	Silver oz/t	Copper Equiv. %
38 (125)	186-224	0.65	0.015	0.004	0.03	1.12
62 (203)	224-286	1.61	0.033	0.007	0.1	2.55

Metal Prices US\$: Cu \$0.75/lb, Au \$325/oz, Pd \$400/oz, Ag \$5.00/oz

DRC Resources is proceeding with the \$1.1 Million Afton 2002 Diamond Drill Program as a continuation of the \$4.7 million program as recommended by the Company's independent engineer.

On behalf of the Board of Directors
"John H. Kruzick"

CAUTIONARY NOTE: Statements in this press release are a preliminary assessment of potential economics under a certain set of parameters and assumptions. The indicated mineral resource is not a mineral reserve and does not demonstrate economic viability. Further studies will be required to determine economic viability. The company relies on litigation protection for "forward-looking" statements.
