Gary Midford: phone Dec 17/85 re Silver Knife

Keeluka - 2 steps today - unlike McDome
- like Packard's ground. mineralized.

Marbaca host = skarn

Younger phyllitic limestone - not exposed locally
underlies & includes lower part of min. zone

Replacement of shear zones heading for Silver Ch
deposit. Reeder zones, along fractures, one
of which goes under

225/65°N prominent fractures 15' wide - by car.
+ down. trace ~4' - large mineralized shear zone.

Qtz - fluorite veins in DSH.

Skarn? Garnet pink in lower hole. May be
banded intrusive.

Will send package of data.
