

Glacier Ck

Mapped on Pz greenstone about pyletic marble
by McEvitt

Baite lodes controlled by large W to NW striking
faults

Silurion chlorite albite sericite hematite
surrounds baite. altered porphyry dyke
medium.

Brown wx 1st near upper chopper pond
- on ridge before descent to upper baite
showing - upper Treane Narrow zone.
Mile 0 will return.

RB isotopes of 2 Gl. Ck + 1 Cap + 1 haev
14enrich (Zn + py + baite) all plot in
cluster 207/206 way to right: high 206
NB look very epigenetic, not same baite
as Mt Henry clay; low dawns, G12 Heights
samples run for Pb.

Why 206/204 from Gader
all 18. - - - - not 19. - - -
