## High Tech to Place Equity

Buy 1/80 stock up.

Kenia process done.

20M Toronto 100 gm by 1 gm Au

0.4% Cu

0.1% Sb + 0.1% As deliberate.

In detail. No pays separation possible. Can't be smelted.

Separate by leaching.

Metall + marketing problem.

Original plan and come to  
Rueger, similar would participate.  
Faded

Process earned 70%, merged  
with Equity. New feasibility.

Confirm revenue 28M hours  
new revenue at same grade.

Leaching on site or in Japan?  
Proposal of As, Sb. Study complete  
in 1979. 4500 TPD prod done.  
in 1979. by Placer-Equity.

Sunshine Mine Idaho already  
used As Sb leach technology.

Some work related to process sketched  
up before final metall + sales details  
decided.

Built up to 80+ leases in Houston.  
6 mo delay, more costs related  
to leaching + recovery processes.

New Sb recovery methods patented.  
Plant well stocked up in mid 1981  
Unleached core probably being sold  
in limited amounts.
