Ag PbZn(CuAu)

Caprose L - ~~Geo~~ Granges. (D claims) May 27/80  
South of Ootsa L, near Mt Swannell.

Bill Lumley reports percussion drilling in Hogelton?  
rhyolite by Granges has roughly delineated  
30 million T of ~10% Ag as argente-chalcite with  
no PbZn in fractured rhyolite.

Prospecting in the area across valley, related?

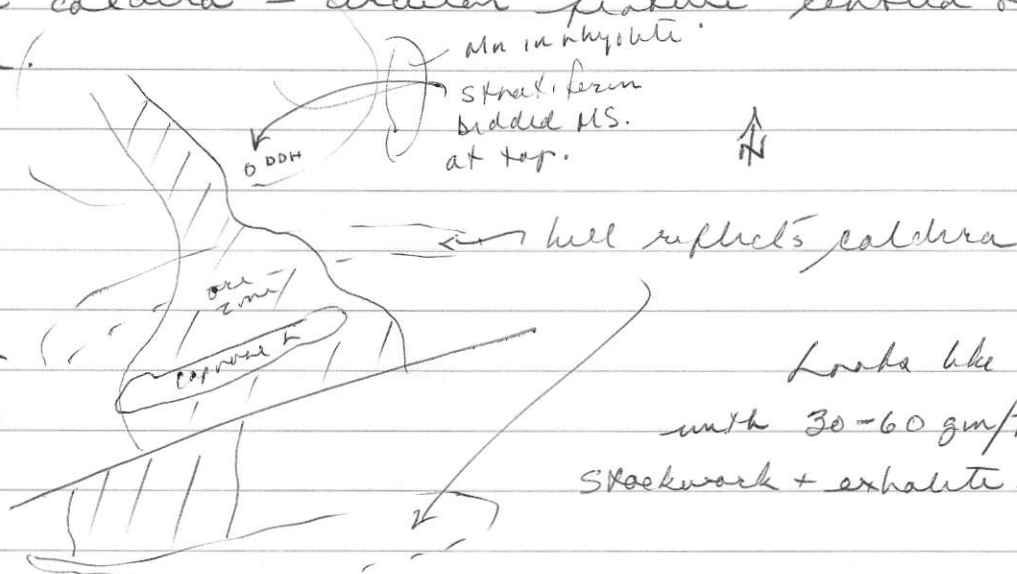

Bulk Ag deposit of major dimensions

No announcements known.

Nov 14/80 Talk to Bill Lumley.

Mineralization at rhyolite/andesite contact. Sphalerite/  
pyrite ± chalcopyrite, arsenopyrite, minor pyroargyrite, Ag telluride,  
tetrahedrite (argentic). Vein + breccia filling in andesite +  
rhyolite. Also some bedded sphalerite-pyrite + Ag nearby to  
N. Volcanic caldera - circular feature centered on  
Caprose Lake.

Large rounded  
boulders in andesite  
and rhyolite (?)  
But argente averaging  
unmet'd. Contains Mn  
belemnites (Boys)

Looks like calc. MS  
with 30-60 gm/T Ag.  
Stockwork + exhalite.
