12G EXEMPTION #82-2647

November 21, 1995

NEWS RELEASE 95.24

Ecstall has been informed by project partner, Inmet Mining Corporation, that they have suspended drilling of hole A-95-19 until next spring due to deteriorating winter weather.

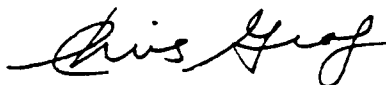

Drill hole A-95-19, which had a target depth of 1200 m, was at a depth of 825 m when stopped, approximately 375 m above the Akie deposit. The drill rig has been winterized and will remain on the A-95-19 drill site in order to resume drilling and complete the hole to target depth next spring.

Encouraging results were received from several 1995 drill holes, specifically drill holes A-95-13 and A-95-18 which intersected mineable widths of oregrade zinc-lead mineralization and demonstrated continuity of a major massive sulfide deposit over a strike length of 1 km long between holes A-94-11 and A-95-16 and extended its dip length by a further 400 m. Significant 1994 and 1995 assay results are set out in the following table:

DRILL HOLE	FROM (M)	TO (M)	INT (M) & (FT)	%Zn+Pb	%Zn	%Pb
A-94-11	337.20	353.30	16.10(m), 53 (ft)	6.51	5.40	1.11
INCLUDES	337.20	348.40	11.20(m), 37 (ft)	8.78	7.53	1.25
INCLUDES	337.20	343.60	6.64 (m), 21 (ft)	11.38	9.84	1.54
A-94-12	437.00	477.40	40.40 (m), 133 (ft)	5.05	4.16	0.89
INCLUDES	455.50	470.80	15.30 (m), 51 (ft)	7.62	6.34	1.28
INCLUDES	460.20	469.50	9.30 (m), 31 (ft)	10.03	8.42	1.61
A-95-13	701.40	734.10	32.7 (m), 108 (ft)	6.65	5.56	1.09
INCLUDES	713.60	729.90	16.3 (m), 54 (ft)	8.15	6.82	1.33
INCLUDES	720.10	726.70	6.6 (m), 22 (ft)	10.14	8.65	1.49
A-95-18	983.30	992.80	9.5 (m), 31 (ft)	9.06	7.72	1.34
INCLUDES	986.20	992.80	6.6 (m), 22 (ft)	10.74	9.22	1.52
INCLUDES	986.20	988.20	2.2(m), 7 (ft)	16.45	14.70	1.75

As shown on the attached map the dimensions of the Akie deposit, inferred from diamond drilling to date, are 1400 m (4600 feet) long X 800 m (2600 feet) deep X 20 m (66 feet) thick. Using a 3.5 tonnes/m³ specific gravity Ecstall estimates the potential sulfide resource to be 78,400,000 tonnes. Ecstall estimates that within this large resource is an intact 12-15 million tonne high grade core of mineralization, assaying > 10% zinc+lead over widths from 6 to 10 m thick. The deposit remains open to depth and along strike.
