(Page 5)

1. North end of Government Vein (on 80-foot level) is 60 feet lower in elevation than south end of vein in Valperaiso South Drift
- at 40°-45° eastward dip, this suggests two en echelon veins.
2. Dip (40°-45°) - difficult to pull muck from slopes - may have to use scrapers & slashers
3. Tonnage to 700': ~ 121,000 tons (5' av. width)

3 marginal economic mineralized zones:

1. Government 80-foot level Drift; Shaft Zone 180' length, average 5' width averaging 0.3 oz gold/ton, 2 oz Ag/ton
2. Government North End:
100' length, average 6.5' width averaging 0.31 oz. gold/ton, 1.5 oz. Ag/ton
- still open
3. Valperaiso South End:
100' length, average ? width - "should average 0.2 oz. gold/ton, 3 to 4 oz. Ag/ton"
