August 26, 1988

Dear Sir,

The Northern Mines of Aug. 8, 88 mentions the Lara property near Clematis, its mineralized zone and grades.

We have a discovery near here which I believe is more than comparable; it is approximately 1/4 mile wide by 1/2 mile long, the ^{high} assays are 57036 CU; 7725 MN; 55.3 AG; 172 PB; 32463 ZN and 1.36202 AU per ton.

We are open to proposals on this and our other nearby properties; one is mine units with one assay of .01 AU; 20.79 oz AG; 10.19% CU.

These are all surface showings and all properties can be driven onto with a 4x4.

Yours truly
Harry Lewis
