McKENZIE ZONE
LARGE GOLD ANOMALY

Preparation for drilling is underway on the McKenzie Zone geochemical gold anomaly on La Rock's Brandywine property, 30 miles north of Squamish, B.C.

The 250 acre (100 ha.) surface area of the McKenzie gold anomaly is twenty times the surface size of the combined DP Zone and Main Showing.

This anomaly has been identified from prior Placer Dome Inc. soil geochemical and geophysical data.

Fox Geological Consultants are managing all aspects of the McKenzie Zone program for La Rock and have established hole locations targeted on the peak gold values in the soil anomaly.

LA ROCK MINING CORP.

ROBERT E. LEE
