Mr. H. Fromme. Yukon Revenue Mines Ltd., 117 Industrial Road, Whitehorse, Y.T. Y1A 2T8

Dear Harry.

Enclosed please find copies of the I.P. profiles over your Ruby Creek property. The B.L. is in two sections but they join not overlap as from the note. We ran it from both ends but the stations were long chained hence the 200 metre discrepancy.

Could you please send by return mail some information to assist in the writing of the report, i.e. for correlation purposes some geochem and geological data. I only have a limited map of the surface features around L-20 and L-24S. I originally had a sketch of the grid showing the location of the lines but I have misplaced that. I particularly have no feeling as to the location of the B.L. and the ROAD profiles, but I believe that there is a Moly anomaly around 18N on the B.L. I do not have any idea as to their location.

Also if this report is to be filed for assessment I would need to have the claim names and record numbers of theproperty, the exact latitude and longitude, and the claims worked on as well as sketch maps of the property location and outline of claims and grid. Only if for assessment filing.

My apologies for invoice #1441. 15% of invoiced amount was supposed to have been deducted for billing on submission of the report as per our letter of agreement. My thanks for your quick attention to the same.

Also my apologies for not writing the report beforehand but I was under the mistaken impression that there was no hurry for the same.

Yours truly,

(V.)

Peter E. Walcott
