Introduction & History

The Little Foster property, a two cell tenure comprising 41.093 hectares, was staked on February 12, 2007, as a supplementary property to the Foster's Bar tenure (tenure 524857), a further property held by the claim holder and author hereof. The Little Foster abuts to the south side of the Foster's Bar property, extends southward along the Fraser River's west bank. Beyond that work which the author's ground team had effected during the previous fiscal, there has been no record found relating to historical placer work being conducted on this property. Work effected during this fiscal program, is further outlined herein.

Location & Access

The Little Foster claim is located along the Fraser River, south of Cinquifoil Creek, within the Kamloops Mining District. The property is centered on coordinate 121° 45' 16.1" W Longitude – 50° 30' 59.7" N Latitude, 33 kilometers northwest of Lytton, BC or otherwise 22 kilometers southeast of Lillooet, BC. Access to the tenure is gained through crossing the Fraser River via the ferry at Lytton, thence following the two lane gravel road northward (toward Lillooet) for approximately 34 road kilometers, to the area of the claim. In alternative, the claim may also be accessed from the Lillooet end (from the north), via the second major south-leading roadway exiting from BC Highway 99, at the southwest end of Lillooet. This road being of the same as that mentioned which extends northward from the Lytton ferry.

Summary & Conclusion

Prospecting on the Little Foster claim during the 2008-2009 fiscal, was carried out on July 1, 2008, along the traverse as indicated by red line marking on Map 2, hereto attached. Work performed consisted of sampling eight test holes randomly selected along the traverse, whereby each pit was hand dug to a mean depth of approximately 0.6 metres, the material from which was classified to ¼" (6mm) using hand screens. Approximately 1.7 cubic metres of gravel in total, were worked, with the holes being refilled prior to departing each location. The aggregate from each pit then underwent preliminary hand-panning, using a portable re-circulating water supply. The cons thereof, were stored in a plastic bucket and later refined to recover the precious metal values. Four small semi-worn nuggets were recovered, the larger of which weighed 1.3 grams, along with 7.7 grams of fine to flour gold. Though not affirmed at this time of writing, a small nugget of 0.63 grams, thought to be platinum, was also recovered. The resulting black sand content was also saved and placed in a collective container for subsequent processing.

In result of this sampling program, the claim was determined to hold satisfactory potential, sufficient to warrant the claim's renewal for a subsequent term.

Work Credits & Cost Statement

-- 12.75 Man Hours

Labor – Ira Troyer..... July 1, 2008	4.25 hours	\$ 85.00
Labor – Tod Troyer..... July 1, 2008	4.25 hours	\$ 85.00
Supervisory – Shannon Anderson..... July 1, 2008	4.25 hours	<u>\$ 127.50</u>
	Sub Total	\$ 200.00
Accommodations 1/5 Shared with tenure 524857 (4254629)		\$ 42.00
Meal Costs		<u>\$ 39.55</u>
	Sub Total	\$ 379.05
Allowable Vehicle Expenses (20%)		\$ 75.81
Report Preparation		<u>\$ 100.00</u>
	Total	\$ 554.86

Attending Parties & Qualifications:

Ira Troyer - - 17 years prospecting experience
Tod Troyer - - 15 years prospecting experience
Shannon Anderson - - 25 years prospecting experience

Report prepared from field notes of Field Supervisor, Shannon Anderson.

January 22, 2009

Report prepared by:
William "Larry" Amey
- - 28 years prospecting experience
