Dear Mr. Starck:

Re: Stewart Property

Enclosed for your information are three copies of vu-graphs prepared for an Esso presentation showing the results of recent drilling in the Trench 2 area. All assay results shown are compiled from assays received from a commercial Vancouver lab.

Drilling was terminated on October 18th due to lack of water and the onset of winter conditions. Since the start of drilling this season, 4510 feet have been completed in 22 holes. One other hole was abandoned last year.

To date, assay results have been received for 16 of the 22 holes drilled. Results for 5 of the 16 holes were reported earlier (October 13, 1982) and results of 3 others are attached. Results for the remaining, unreported 8 holes are deemed insignificant.

Yours very truly,

C. A. Aird
