3. GEOLOGY

- 3.1 Regional: In Fennel Fm. (Slide Mtn Group) - lower greenstone minor limestone
- Property lies over a major NNE trending fault. Mineralization likely related to fault. Cretaceous granodiorite about 1km to 2km to north
- 3.2 Property: Property lies on a ridge bound by sharp valleys - valleys are likely fault traces - two VIF anomalies aligned along valleys reflect fault traces? reflect swamps? reflect topography? outcrops are andesite - siliceous Pb-Zn, Ag float
- 3.3 Reserves: \_\_\_\_\_
- 3.4 Exploration Potential: Area of goldbearing arsenopyrite float corresponds with arsenopyrite anomaly which extends the full length 1.5km of grid - gold values are low for soil samples only a few values of 6-10ppb
