To : Mr. James Paxton, Chief geologist
From : Hun Kim, geologist
Subject : Monthly report of April

Dear Sir:

The access road to my 1970 regional mapping area is yet partly passable to vehicle, so I could not do mapping in this month.

For a total of one week, I have joined with Kiwan-Chris team.

On April 23, I , with Kiwan and Chris, examined the showings in the Spud claims consisting of 4 regular claim lots in the junction of CPR and Fisherman Creek(see : Spud claim on file). The showings were exposed by a short tunnels and pit. They consist of mainly pyrite and minor chalcopyrite with local sphalerite(?). It might be noteworthy that these showings, though thin and poor in thickness and megascopically determined grade, were associated with black argillite(please refer to : the showing skech maps).

Respectfully yours

Hun Kim
