ANNUAL GENERAL MEETING

The Annual General Meeting of Western Mines Limited will be held on Friday, May 27, 1977, at 10:30 a.m. in the Four Seasons Hotel, Vancouver, B.C.

Annual Report of the Board to the Shareholders

There was an increase in ore mined and all metals produced at the Company's Buttle Lake mine in 1976 compared to 1975. The level of mine exploration and development was also significantly higher as a result of which a new ore zone, the 'S' zone, was discovered and ore reserves were maintained at approximately the 1975 level. Nineteen outside properties, twelve of which were acquired from Brascan Resources at mid year, were investigated by the Company and seven of these were drilled. The Company's most important program is being conducted on the Great Slave Reef project, Northwest Territories where a significant accumulation of zinc and lead mineralization was drill indicated during the year. Significant encouragement was also obtained on the Costigan and Dubawnt uranium properties in Saskatchewan and Northwest Territories. These properties were acquired from Brascan Resources. Net smelter return on your Company's products for the year was \$15.6 million compared to \$14.6 million in 1975. However, increased costs reflecting the increased mine exploration and development activity and, particularly, the level of outside exploration reduced earnings from \$0.7 million in 1975 to \$0.3 million for the year. Tax exposure was significantly reduced through implemen-

A. W. Farmilo

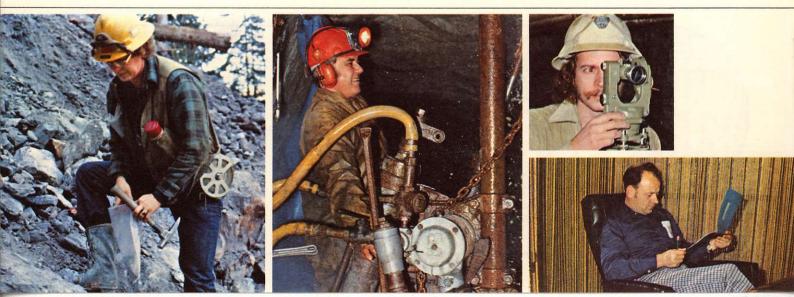

tation of the new Mineral Resources Tax Act and the shelter provided through the increased activities. As a result, cash flow in 1976 at \$2.1 million was approximately the same as that achieved in 1975. After payment of a dividend of ten cents per share, net working capital increased by \$1,185,668 to \$11,945,019 at the end of 1976.

Mine production for 1977 is scheduled at approximately the 1976 level and a further significant increase in mine exploration and development is planned. Outside exploration costs will be reduced to the 1975 level but the Company's level of activity and exposure will be maintained through further joint ventures; in particular a planned farmout on a small portion of the Company's equity in the

H. R. Snyder

Great Slave Reef/West Reef Projects and a joint venture currently under negotiation with a major European utility on the uranium program will significantly reduce the Company's exploration expenditures but greatly enhance exposure. Based on prevailing metal prices, similar earnings are anticipated in 1977 as those achieved in 1976. Should these prices deteriorate, consideration will be given to a reduction of the mine exploration and development expenditures and a further reduction in outside exploration expenditures. Diversification of the Company's asset and earnings base remains an important objective, and once again an active search for an acquisition appropriate to the Company's needs will be undertaken.

The Board of Directors elected Mr. A. W. Farmilo Chairman of the Board in mid year, filling the vacancy created by the retirement of Mr. W. G. Jewitt at the end of 1975. Dr. A. E. Soregaroli assumed the position of Vice President -Exploration during the year and Mr. G. I. Dziny was appointed Manager of Operations. It is with regret that we record the death in December, 1976 of Mr. Ernest C. Hammond, an honorary Director of your Company and a key figure in the early development of the Company. On behalf of the Board

lutamile

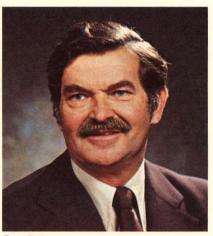

A. W. Farmilo Chairman

H. R. Snyder President and Chief Executive Officer March 14, 1977

OPERATIONS

Production

The year saw an increase in percentage of ore mined underground, from 81.8% in 1975 to 91.4% in 1976. 8.6% was extracted from the Myra Open Pit.

G. I. Dziny

Tons milled increased from 287,393 tons in 1975 to 296,846 tons in 1976. As the majority of key operating personnel are long term employees and entitled to extended vacation periods, the July holiday shutdown was increased from two to three weeks, decreasing the number of operating days from 325 in 1975 to 318 in 1976. Average daily mill throughput was increased from 884 tons per day to 933 and, together with higher ore grades and slightly improved mill recoveries, concentrate production increased from 8,877 tons in 1975 to 9,934 tons in 1976 (copper), from 7,613 tons to 7,981 tons (lead), and from 34,416 tons to 35,604 tons (zinc).

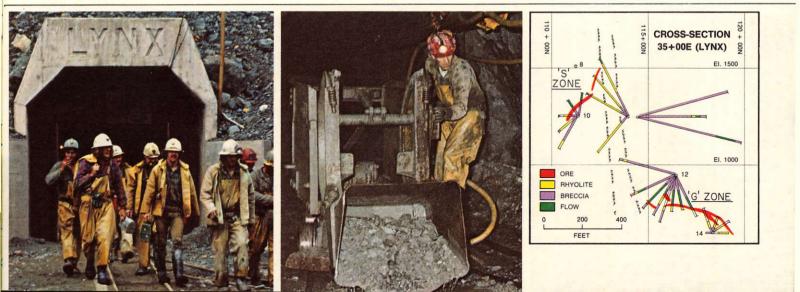

A considerable improvement was noted in Company-Union relations during 1976. Labour turnover and absenteeism dropped to a record low, contributing to improved production efficiencies.

Mine Exploration and Development

Advantage was taken of an improved taxation situation facing your Company during 1976 to expand the exploration and development programme at the Buttle Lake operation. Underground

Ore Reserves	Proven ore reserves as of January 1, 1977 were:	
---------------------	-------------------------------------------------	--

	Tons	Gold Oz./Ton	Silver Oz./Ton	Copper %	Lead %	Zinc %
Lynx	1,073,800	0.08	2.7	1.4	0.9	8.1
Myra Standard	490,800	0.10	5.4	0.9	1.5	7.3
Myra High Grade	90,900	0.20	15.2	0.8	3.1	10.6
Stockpile	48,500	0.04	1.1	0.6	0.6	5.5
	1,704,000	0.09	4.1	1.2	1.2	7.9
	Proven or	e reserves a	as of Janua	iry 1, 1976	were:	
	1 731 300	0.09	4.2	1.2	1.2	7.9

development increased from 12,050 feet in 1975 to 14,732 feet in 1976 and underground diamond drilling from 24,457 feet to 40,368 feet. Consequently, tonnage added to ore reserves during the year was almost sufficient to replace tonnage mined. Also, the new 'S' ore zone, containing metal values slightly higher than mine average, was discovered.

Operating Costs

With increased diamond drilling, mine development and exploration, expenditures in these areas rose from \$651,812 (1975) to \$834,325 (1976) which, together with inflationary pressures, were the principal causes of operating costs increasing from \$30.05 per ton in 1975 to \$34.07 in 1976. Additionally, \$273,191 was expended on exploration work in the Price Creek area in 1976 as compared to nil in 1975. Other factors contributing to higher operating costs were the continuation of maintenance projects required for increased exploration, development and underground mining activities which were delayed during 1975.

Environmental Control

Despite exceptionally stringent standards, monitoring by the Pollution Control Board shows that all characteristics are being maintained at satisfactory levels. Additionally, tests performed by the Board on water quality and fish life in Buttle Lake confirm the acceptable practices initiated and maintained by the mine.

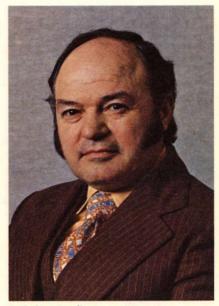

General

Mr. E. Sader was appointed Assistant Manager and Mr. A. Steward was appointed Mine Superintendent.

G. Dziny Manager of Operations

OUTSIDE EXPLORATION

Outside exploration expenditures in 1976 totalled \$3,034,990 of which \$580,500 were for acquisition of mining properties and other assets from Brascan Resources Limited for 89,722 shares. Exploration was largely directed towards the search for lead-zinc deposits in carbonates (Great Slave Reef) and for uranium deposits acquired from Brascan. Additional search was directed towards volcanogenic massive sulphides, porphyry cop-

A. E. Soregaroli

per-molybdenum, gold-silver and base metal deposits. Nineteen properties were actively explored during the year, seven of which were drilled.

During 1976 Western Mines established an exploration office in Toronto to complement the exploration efforts in western Canada. Toronto exploration personnel, under the direction of Bruce K. McKnight, are charged with uranium exploration in Canada and with base and precious metal search in eastern Canada. Exploration in western Canada, which is largely base metal oriented, is directed by Bruce E. Spencer.

Principal properties investigated were:

(A) Great Slave Reef/West Reef Projects (Northwest Territories)

Work on the Great Slave Reef/ West Reef projects resulted in the discovery of a significant lead-zinc deposit. These joint ventures of Western Mines and Du Pont of Canada Exploration Limited acquired and partially explored a 26-mile western extension of the Pine Point lead-zinc district. Exploration of the area, which is devoid of outcrop, is accomplished by three phases of diamond drilling aided by geophysical (I.P.) and geochemical (rock chip from drill core) surveys.

During 1976 one hundred and thirty holes totalling 105,000 feet were completed as a result of which a significant zone of mineralization, the X-25 deposit was discovered and partially delineated. Drill indicated reserves of this zone at year end 1976 were 2,813,000 tons grading 11.9% zinc and 4.1% lead. Other mineralized drill intercepts require additional follow-up drilling (Phase III).

(B) Uranium Project

The search for uranium ores which began as a Brascan Resources Limited project was continued through Western Mines in 1976. The project involves the development of working models of uranium genesis and the application of these models to the search for uranium ores.

During 1976 exploration was performed on seven uranium properties in Saskatchewan, the Northwest Territories and Ontario, the most important of which are:

1. Costigan (Saskatchewan)

The Costigan property covers 42,000 acres immediately south of the important Key Lake uranium property. The property is being explored by Scurry Rainbow Oil Limited and Western Mines under terms of a 50/50 joint venture. Geological mapping, prospecting, geochemical and geophysical surveys have delineated anomalous areas which will require considerable effort in 1977.

2. Westgate (Saskatchewan)

In the fall of 1976 a claim block which straddles the contact of the Athabasca Sandstone and the underlying Aphebian metamorphic rocks on the south margin of the Athabasca Basin was acquired by Western Mines. Preliminary evaluations have been inconclusive and further work is required in 1977 to fully evaluate the potential of this claim block.

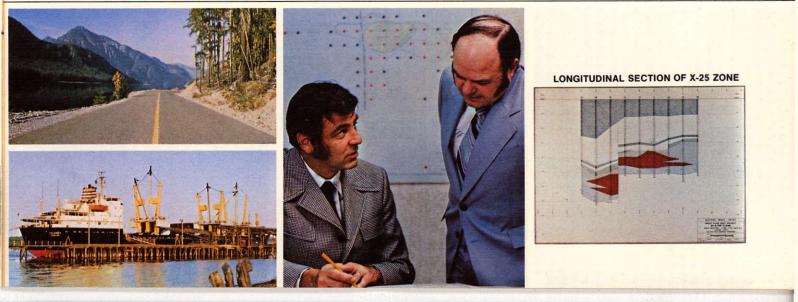

3. Dubawnt (Northwest Territories)

Three prospecting permits about one hundred miles northwest of Baker Lake were evaluated by means of prospecting, geological mapping and radiometric and geochemical (water and lake sediment) surveys. Several radioactive showings and geochemical anomalies in geologically favorable areas require considerable detailed testing in 1977.

(C) Volcanogenic Massive Sulphide Deposits

1. Kuroko Project (Northern California)

Inspection of several mining districts in western United States in search for volcanogenic zinc-copper ores similar to those at Buttle Lake led to acquisition of the Bully Hill-Rising Star and the Afterthought properties in the East Shasta district of northern California. Both properties have recorded production and indications are that considerable zinc ore remains in the Bully Hill mine. Geological studies were completed on both properties and were accompanied by geophysical (I.P.) and geochemical (soil) surveys on the Afterthought property. Several anomalous conditions defined by these surveys will require evaluation in 1977.

2. Yava Project (Northwest Territories)

The Yava joint venture between Brascan Resources Limited, Conwest Exploration Company Limited and S. Roscoe, was formed to evaluate the southerly extension of the greenstone belt that hosts the Bathurst Norsemines Limited volcanogenic zinc-copper-lead-silver deposits. The joint venture has staked about thirty miles of favorable geology and has investigated several airborne geophysical anomalies and gossan areas in the claim block. One massive sulphide zone, the Yava No. 1 Zone, has been partially drilled. Other anomalous areas were less productive.

In 1976 Western Mines acquired part of the Brascan Resources Limited interest in the property. Exploration during the year was limited to detailed geological studies combined with geochemical and geophysical surveys aided by hand trenching. Two additional geological targets, as well as the Yava No. 1 Zone, require further evaluation.

Aloregarde

A. E. Soregaroli Vice President-Exploration

1976 FINANCIAL REPORT

Consolidated net earnings in 1976 were \$318,909 or 6¢ per share, compared to \$664,174 or 13¢ per share in 1975. Cash flow from operations was \$2,051,882 or 39¢ per share compared to \$2,307,328 or 44¢ per share in 1975.

The working capital position of the Company at the beginning of the year was \$10,759,351. This was improved by the aforementioned cash flow from operations of \$2,051,882 supplemented by \$48,969 from stock option payments, proceeds from sale of fixed assets of \$18,389 and a reclassification of taxes of \$228,148. Working capital was utilized for dividends of \$532,894, investments \$31,053, and development, property, plant and equipment additions of \$597,773. This resulted in a working capital balance of \$11,945,019 at year end.

A significant portion of the Company's cash position was maintained in U.S. funds throughout the year. While this produced less interest income, it was possible to utilize this revenue in offsetting U.S. exploration expenditures. The improvement in the value of the U.S. dollar in relation to the Canadian dollar near year end raises the possibility of converting these funds if further improvement materializes. The strengthening of the U.S. dollar will have a positive

R. O. Hampton

effect on 1977 as all smelter payments are received in this currency.

Taxation policies were improved in 1976 when the B.C. Government repealed the Mineral Royalties Act, the Mineral Land Tax Act and the Mining Tax Act. These Acts were replaced by the Mineral Resource Tax Act which imposes a tax at the effective rate of 15% on profits derived from B.C. mining operations. Profits from operations in British Columbia of a Canadian mining company will be subject to a maximum overall tax rate of 57% compared to the effective tax rate of 76% to which your Company was subjected in 1975.

R. O. Hampton Secretary-Treasurer

AUDITORS' REPORT TO THE SHAREHOLDERS

We have examined the consolidated balance sheet of Western Mines Limited as at December 31, 1976 and the consolidated statements of earnings, earnings reinvested in the business and changes in financial position for the year then ended. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests and other procedures as we considered necessary in the circumstances.

In our opinion these consolidated financial statements present fairly the financial position of the company as at December 31, 1976 and the results of its operations and the changes in its financial position for the year then ended in accordance with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

Coopers & hybrand

Vancouver, B.C. March 10, 1977

Chartered Accountants

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

FOR THE YEAR ENDED DECEMBER 31, 1976

1. SIGNIFICANT ACCOUNTING POLICIES

(a) Principles of consolidation

These financial statements include the accounts of the company and its wholly-owned active subsidiaries, Western Mines Inc. and Western Coal Holdings Inc., which are engaged in mining exploration activities in the United States.

(b) Translation of foreign currencies

Current assets and current liabilities in foreign currencies are translated at year-end rates. Non-current assets, related depreciation and non-current liabilities are translated at the rates applicable at the time of the relevant transactions. Revenues and expenses, other than depreciation, are at average rates of exchange for the year. Exchange adjustments are included in the determination of net earnings.

(c) Concentrate settlements receivable and concentrate inventories

Concentrate settlements receivable are valued at the metal prices prevailing at the time of shipment less provision for estimated market adjustments, treatment and marketing charges. In accordance with the terms of the sales contract, final settlements are made at prices prevailing at a future date and the amounts eventually received by the company may vary from the amounts shown as concentrate settlements receivable at December 31, 1976.

Concentrate inventories are valued at the metal prices at December 31, 1976, less provision for estimated market adjustments, treatment and marketing charges.

(d) Depreciation and amortization

Depreciation and amortization of mining properties, plant and equipment are calculated on a basis relating to production and ore reserves. Automotive equipment is depreciated on the same basis or at the rate of 20% of cost on a straight-line basis whichever is greater. Staff housing, located in the Campbell River area, is depreciated at the rate of 5% per annum on a straight-line basis.

(e) Deferred development

Exploration expenditures including acquisition costs and related administration overhead are charged against earnings as incurred. Once economically recoverable reserves have been established, expenditures associated with that project are capitalized until production commences.

Deferred development represents the cost of development relating to areas where economically recoverable mineral, oil and gas reserves are established, less amortization. These costs are amortized over the life of the reserves from the time production commences or written-off if the project is abandoned.

(f) Income and mineral resource taxes

The company follows the tax allocation basis of accounting for corporate income and mineral resource taxes. Taxes deferred to future years as a result of claiming for tax purposes amounts different from those recorded in the accounts are charged against current operations and are recorded in the balance sheet as deferred income and mineral resource taxes. The timing differences relate primarily to depreciation and deferred development costs.

2. PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment and related accumulated depreciation and amortization are:

		1976		1975
	Cost \$	Accumulate depreciatio and amortizatio \$	n	Net \$
Mining properties	203,903	81,590	122,313	142,713

	13,132,714	6,464,252	6,668,462	7,171,391

3. DEFERRED DEVELOPMENT

Beginning of year Expenditures during the year	1976 \$ 958,754 101	1975 \$ 1,638,661 48,289
	958,855	1,686,950
Amortization and write-offs during the ye Charged to operating costs Charged to other expense	ar 447,044	456,187 272,009
	447,044	728,196
End of year	511,811	958,754

4. SHARE CAPITAL

(a) By agreement dated June 30, 1976, the company acquired certain mineral properties and other assets from Brascan Resources Limited in exchange for 89,722 shares of the company issued at \$6.47 per share (\$580,500). The acquisition cost has been charged to operations in the current year in accordance with the company's stated accounting policies and is included in exploration and property costs in the consolidated statement of earnings.

(b) A total of 25,650 shares was issued for cash of \$48,969 under terms of stock option plans available to employees and a consultant. As at December 31, 1976, 94,100 shares remain outstanding under existing stock options, exercisable at varying dates to 1981 at prices ranging from \$1.86 per share to \$5.29 per share.

(c) The company holds 30,100 shares which were purchased for \$67,603 which have been treated as a reduction of issued share capital pending resale or retirement.

5. PROVISION FOR INCOME AND MINERAL RESOURCE TAXES

The provision for income and mineral resource taxes

included in the statement of earnings for the year ended December 31, 1976 is comprised of:

	1975
