Ottawa, Ontario K1A 0E4

Dear Rod:

As a follow-up on our early morning conversation at the P and D, I enclose a map outlining the extent of our Mill claims on Hudson Bay Mtn. Any information that you are willing to part with on the outlined claim area would be greatly appreciated - in particular your 1" = 1,000' scale geology sheets and pertinent assay data on the veins.

You also mentioned, as I imperfectly recall, that a drill hole was put down (in the late 1960's?) somewhere in the valley floor west of the Mill claims and intersected quartz porphyry. Could you provide a specific location and reference to this drill hole? You also referred to some veins in the Yorke Hardy adit which assayed in the 0.4 oz/t Au range. Any documentation you can provide of these veins (location, width, assays) would be most useful.

I look forward to your response to this barrage of questions, and hope that we can continue our conversation on your next trip west (in April for the CIM?).

Best regards,

CANAMAX RESOURCES INC.
